Introduction to Contextual Maths in Chemistry Fiona Dickinson, Andrew McKinley, 2023-01-17 CHEMISTRY STUDENT GUIDES GUIDED BY STUDENTS For any student who has ever struggled with a mathematical understanding of chemistry this book is for you Mathematics is the essential tool for physical scientists We know that confidence in using mathematics early on in a chemistry degree builds a solid foundation for further study However applying the abstract mathematics taught in schools to chemical phenomena is one of the biggest challenges that chemistry students face In this book we take a chemistry first approach We link the mathematics to

recognisable chemical concepts building on high school chemistry to facilitate deeper understanding We cover the practical mathematical skills including representation of data as tables and graphs and give an overview of error handling in the physical sciences More advanced mathematical concepts are introduced using calculus to determine kinetic rate laws intermolecular forces and in quantifying energetic change in thermodynamics We also introduce the concept of the complex number and its role in considering quantum wave functions widely used in computational chemistry There are worked examples and problem sets to provide plenty of practise material to build proficiency We also include insights from real students which identify common problem areas and provide the prompts that helped them to overcome these Chemistry Student Guides are written with current students involved at every stage guiding the books towards the most challenging aspects of the topic

Measuring Risk in Complex Stochastic Systems J. Franke, Wolfgang Härdle, Gerhard Stahl, 2012-12-06 Complex dynamic processes of life and sciences generate risks that have to be taken The need for clear and distinctive definitions of different kinds of risks adequate methods and parsimonious models is obvious The identification of important risk factors and the quantification of risk stemming from an interplay between many risk factors is a prerequisite for mastering the challenges of risk perception analysis and management successfully The increasing complexity of stochastic systems especially in finance have catalysed the use of advanced statistical methods for these tasks The methodological approach to solving risk management tasks may however be undertaken from many different angles A financial institution may focus on the risk created by the use of options and other derivatives in global financial processing an auditor will try to evaluate internal risk management models in detail a mathematician may be interested in analysing the involved nonlinearities or concentrate on extreme and rare events of a complex stochastic system whereas a statistician may be interested in model and variable selection practical implementations and parsimonious modelling An economist may think about the possible impact of risk management tools in the framework of efficient regulation of financial markets or efficient allocation of capital
