Zadrozny,2014-09-20 This two volume set of books constitutes the proceedings of the 2014 7th IEEE International Conference Intelligent Systems IS or IEEE IS 2014 for short held on September 24 26 2014 in Warsaw Poland Moreover it contains some selected papers from the collocated IWIFSGN 2014 Thirteenth International Workshop on Intuitionistic Fuzzy Sets and Generalized Nets The conference was organized by the Systems Research Institute Polish Academy of Sciences Department IV of Engineering Sciences Polish Academy of Sciences and Industrial Institute of Automation and Measurements PIAP The papers included in the two proceedings volumes have been subject to a thorough review process by three highly qualified peer reviewers Comments and suggestions from them have considerably helped improve the quality of the papers but also the division of the volumes into parts and assignment of the papers to the best suited parts **Robotic Welding, Intelligence and Automation** Tzyh-Jong Tarn,Shan-Ben Chen,Changjiu Zhou,2007-09-11 Robotic welding systems have been used in different types of manufacturing They can provide several benefits in welding applications The

most prominent advantages of robotic welding are precision and productivity Another benefit is that labor costs can be reduced Robotic welding also reduces risk by moving the human welder operator away from hazardous fumes and molten metal close to the welding arc The robotic welding system usually involves measuring and identifying the component to be welded welding it in position controlling the welding parameters and documenting the produced welds However traditional robotic welding systems rely heavily upon human intervention It does not seem that the traditional robotic welding techniques by themselves can cope well with uncertainties in the welding surroundings and conditions e g variation of weld pool dynamics fluxion solid weld torch and etc On the other hand the advent of intelligent techniques provides us with a powerful tool for solving demanding real world problems with uncertain and unpredictable environments Therefore it is interesting to gather current trends and to provide a high quality forum for engineers and researchers working in the field of intelligent techniques for robotic welding systems This volume brings together a broad range of invited and contributed papers that describe recent progress in this field

Robot Manipulators Marco Ceccarelli, 2008-09-01 In this book we have grouped contributions in 28 chapters from several authors all around the world on the several aspects and challenges of research and applications of robots with the aim to show the recent advances and problems that still need to be considered for future improvements of robot success in worldwide frames Each chapter addresses a specific area of modeling design and application of robots but with an eye to give an integrated view of what make a robot a unique modern system for many different uses and future potential applications Main attention has been focused on design issues as thought challenging for improving capabilities and further possibilities of robots for new and old applications as seen from today technologies and research programs Thus great attention has been addressed to control aspects that are strongly evolving also as function of the improvements in robot modeling sensors servo power systems and informatics But even other aspects are considered as of fundamental challenge both in design and use of robots with improved performance and capabilities like for example kinematic design dynamics vision integration
