Practical Guide to Digital Manufacturing Zhuming Bi, 2021-05-24 This book covers the subject of digital manufacturing. It provides a practical guide for readers on using computer aided design CAD, computer aided engineering CAE and computer aided manufacturing CAM and other computer assistive tools for the design of products, machines, processes and system integrations through the case studies of engineering projects. The book introduces a thorough theoretical foundation and discussion of the historical development and enabling technologies of digital manufacturing. It also covers a broad range of computer aided tools for a variety of applications including geometric modelling, assembly modelling, motion simulation, finite element analysis, manufacturing process simulation, machining programming, product data management and product lifecycle management. Practical Guide to Digital Manufacturing uses many real world case studies to illustrate the discussed applications, making it easily readable for undergraduate and graduate students as well as engineers with the needs of computer aided design and manufacturing knowledge and skills.

Architecture and Design for Industry 4.0 Maurizio Barberio, Micaela Colella, Angelo Figliola, Alessandra Battisti, 2023-10-06 This book collects contributions of forefront research and practices related to the use of the enabling technologies of Industry 4.0 in the architecture and design fields and their impact on the UN's Sustainable Developments goals. The book is structured into three sections: research practice and technologies with the goal of creating a new framework useful for widespread awareness necessary to initiate technology transfer processes for the benefit of the public sector, universities, research centers and innovative companies; and a new professional figure capable of controlling the entire process is essential. Thus, the book chapters arouse a series of relevant topics such as computational and parametric design, performance based architecture, data driven design strategies, parametric environmental design and analysis, computational and parametric structural design and analysis, AI and machine learning, BIM and interoperability, VR and AR, digital and robotic fabrication, additive manufacturing and 3D printing, R D and entrepreneurship, circular architecture and didactics. In the post digital era where the essence of design lies in the control and information of the process that holistically involves all the aspects mentioned above rather than in formal research, it is necessary to understand technologies and analyze the advantages that they can bring in terms of environmental sustainability and product innovation.
