Mineralization and Sustainable Development in the West African Craton T. Aïfa, 2021-07-22 This Special Publication combines results obtained by interdisciplinary groups from numerous academic institutions working on Paleoproterozoic formations to decipher the origins of the main mineralization resources in the West African Craton WAC and their impacts on African economic development Structural geophysical sedimentological stratigraphical geochemical petrophysical and mineralogical analyses have been used to highlight the complexities involved

in mineralization emplacement and its origin and evolution within the WAC Fourteen articles contribute to new knowledge in mineral research They show that the geodynamic evolution of the WAC is complex from one area to another it involves subduction collision and obduction during several deformation phases ranging from Birimian 2 3 2 0 Ga to Pan African 650 450 Ma events Various modelling techniques when integrated help in understanding the mechanisms of mineralization emplacement some of which are still a matter of debate The challenge for further studies is mitigation for sustainable development that can be appropriately used to minimize such damage

Radiological Issues for Fukushima's Revitalized Future Tomoyuki Takahashi, 2016-01-12

This book overviews environmental issues 4 years after the Fukushima nuclear accident covering a wide range of areas related to radiation and radioactivity. The topics discussed are necessary to make clear the relationship between the results of research and Fukushima's revitalized future. The chapters are divided into four parts. Part 1 presents the identification of radionuclides in soil and migration of radionuclides in the terrestrial environment. Part 2 describes the safety decontamination system and treatment of radioactive waste. Part 3 explains the development of the system of measurement of environmental radiation and evaluation of external exposure, and Part 4 discusses the identification of radionuclides in farm products, control of root uptake, identification of decreasing radionuclides by food processing, and evaluation of internal exposure. Since the accident at the Tokyo Electric Power Company's Fukushima Daiichi nuclear power station in 2011, gradual steps have been taken toward environmental recovery in the area. However, there are still many issues that need to be tackled in order to achieve the full revitalization of Fukushima. These issues encompass many different disciplines such as economics, psychology, and sociology. In this kind of situation, the role of science in relation to radiation and radioactivity is especially important. This book aims to contribute to planning countermeasures against nuclear disasters in the future. It will be of particular interest to governmental officials who are engaged with the Fukushima nuclear accident, researchers including those in international sectors who are interested in radiological issues, and those who need comprehensive and reliable information about the Fukushima accident.

Understanding the Geological and Medical Interface of Arsenic - As 2012 Jack C. Ng, Barry N. Noller, Ravi Naidu, Jochen Bundschuh, Prosun Bhattacharya, 2012-07-06 The congress Arsenic in the Environment offers an international multi and interdisciplinary discussion platform for arsenic research aimed at practical solutions of problems with considerable social impact as well as focusing on cutting edge and breakthrough research in physical chemical toxicological medical and other specific issues on arsenic on a broader environmental realm The congress Arsenic in the Environment was first organized in Mexico City As 2006 followed by As 2008 in Valencia Spain and As 2010 in Tainan Taiwan The 4th International Congress As 2012 was held in Cairns Australia from July 22 27 2012 entitled Understanding the Geological and Medical Interface of Arsenic The session topics comprised 1 Geology and hydrogeology of arsenic 2 Medical and health issues of arsenic 3 Remediation and policy 4 Analytical methods for arsenic and 5 Special topics on Risk assessment of arsenic from mining Geomicrobiology of arsenic Geothermal arsenic Rice arsenic and health perspectives Sustainable mitigation of arsenic from field trials to policy implications and Biogeochemical processes of high arsenic groundwater in inland basins Hosting this congress in Australia was welcome and valued by the local scientific communities Australia is a mineral rich country where mining has generated significant economic benefit to its people Unfortunately historical mining for base metals gold and arsenic had led to environmental contamination of arsenic Locally produced arsenical compounds were widely used as pesticides and in timber preservation It is known that there are several thousands of cattle and sheep dip sites contaminated with arsenic in Australia However commonly observed symptoms of chronic arsenic poisonings such as those found in endemic blackfoot areas are seemingly absent from these types of environmental contamination due to good quality of potable water supply Does this fall in the classic argument of the dose makes the poison This congress theme of understanding the geological and medical interface of arsenic will advance our knowledge in minimising the risk posted by this so called number one prioritised contaminant arsenic The Far Northeast Kenneth R. Holyoke, M. Gabriel

Hrynck,2022-03-22 The Far Northeast 3000 BP to Contact is the first volume to synthesize archaeological research from across Atlantic Canada and northern New England for the period spanning from 3000 years ago to European contact. Recently notions of the Woodland period in the broader Northeast have drawn scrutiny from experts due to increasing awareness that its hallmarks such as horticulture, village formation, mortuary ceremonialism and the advent of various technologies appear to be less synchronous than once thought. By paying particular attention to the Far Northeast and its unique yet sometimes marginal position in Woodland discourse, this work offers a much needed in depth look at one of the best documented cases of hunter gatherer persistence and adaptation at the eve of European contact. Penned by academic government and cultural resource management archaeologists, the seventeen chapters in The Far Northeast 3000 BP to Contact draw on decades of research in considering this period both in terms of variability within the region and integration with broader cultural patterns in the Northeast and beyond.
