Asuman Kiyak,Kevin Kawamoto,2015-06-08 **Baudrillard and Aging** Jason Powell,2025-04-07 Baudrillard and Aging seeks to delve into the intricate relationship between age and society drawing on the influential theories of French philosopher Jean Baudrillard This book will explore how aging and the aging process are shaped by the hyperreal world we inhabit emphasizing the paradoxical amplification of youth and the loss of authenticity in contemporary society By analyzing

Baudrillard's theories in the context of aging this book aims to provide a fresh perspective on the challenges and paradoxes faced by individuals as they grow older. In our modern society aging is a complex and multifaceted phenomenon that is often met with anxiety and resistance. Jean Baudrillard's original theories on simulation, hyperreality, and the collapse of meaning offer unique insights into how the aging process has been transformed and mediated within a culture that relentlessly fetishizes youthfulness. This book will examine how the hyperreal simulacra of aging are constructed, perpetuated, and imposed upon individuals as they age. It will also explore the consequences of this simulated lifecourse, including the erasure of authentic experiences of aging and the subsequent alienation and dissatisfaction experienced by older individuals.

The International Handbook on Aging Erdman P. Palmore, Frank Whittington, Suzanne Kunkel, 2009-10-27

The United Nations World Assembly on Aging has made advancing health and well-being into old age a worldwide call for action. And this text at hand shows us what researchers worldwide are doing to answer that call. Here, three of America's most esteemed experts on aging lead a global team of contributors, each an expert in his or her country, to show us what the top challenges of each nation are and what top research is being done there to meet those. While we cannot predict with absolute certainty all of the issues that will arise over the next 20 years, we can anticipate some, and we must start now to prepare for these challenges. An expert from the U.S. Department of Health and Human Services warned at a recent UN World Assembly on Aging: "Needed response to the global population shift is not just the responsibility of governments but will be a product of wise long-term decisions made by individuals and societies," she explained. In most nations, globally, populations are graying, and the number of people aged 65 and older is vastly increasing, creating a larger segment of senior citizens than the world has ever before seen. Across human history, the elderly accounted for no more than 3 percent of the world population. By the year 2030, the elderly are expected to make up about 25 percent of the world population. And while longevity is of course seen as a great success, longer lifespans for such masses also create dilemmas. For example, the incidence of dementia has already increased significantly, with an 11-fold increase in people aged 65 and older in the US since the turn of the century, and a similar increase in aged people in Scotland has researchers there scrambling to find treatments for what they expect will be a 75 percent increase in dementia over the next 25 years. Chronic diseases that come with aging are already taxing health care systems in the US and around the world. To Japan, with most experts aware their current health systems would be overrun and lack enough staff and facilities to handle the needs of an elderly population multiplying largely in the coming two decades. Increases in psychological issues such as dealing with depression often striking aged people are impending, too, as are social issues such as how families and public policies will deal with the changing shape of the family.

Handbook on Ethical Issues in Aging Tanya F. Johnson, 1999-06-30

Johnson addresses ethical issues in aging in a variety of contexts: the social, cultural, environment, physical health care, mental health care, social health care, legal care, and spiritual care. Because long-term aging has created a new generation of older adults, some new issues are emerging which need to be addressed.

from an ethical perspective elder abuse physician assisted suicide dementia intergenerational equity guardianship and living wills A wide range of experts including physicians philosophers lawyers social workers nurses sociologists public health persons theologians historians and ethicists share their insights on the ethical issues and dilemmas older adults in American society are facing or are likely to face over the life course Of interest to undergraduate and graduate faculty and students in sociology social work and social services practitioners policymakers and academic and professional libraries

Social Gerontology Nancy R. Hooyman, H. Asuman Kiyak, 1993 Aging is a fact of life We see our parents and grandparents go through it We even see ourselves go through it As we get older we enter a distinct stage of life complete with its own biological issues and psychological and social ones too Yet most books on social aging ignore the psychological and biological aspects of aging that make the social issues so important This book provides a complete look at aging so that we can better understand the older stage of life for both ourselves and those around us This book presents a multidisciplinary perspective on social aging It takes the approach of the older person in context and how age related changes in the biological functional and psychological domains can influence the older person's interactions with his/her social and physical environment Unique features include an original approach a multidisciplinary perspective a framework based on research findings and attention to differences by age gender ethnic minority status sexual orientation and socio-economic class Social workers psychologists gerontology professionals and professors
