**Total Quality Management, (Revised Edition)**, 2011 Measuring Strategies in Tactile Coordinate Metrology Robert Roithmeier, 2014-10-24 Today there is hardly any workpiece whose form parameters cannot be measured by means of coordinate measuring machines The universal use of these machines allows a wide range of application of this technology which however increases inevitably the complexity of its handling The numerous options of the machine specific operating software on the one hand and the various theoretical considerations regarding a target oriented treatment of measuring jobs on the other hand result in the fact that the measuring results obtained from the same coordinate measuring machine on the

same workpiece under similar conditions may differ In Order to increase the comparability of measuring results it is necessary to provide the operators of coordinate measuring machines in addition to a well founded AUKOM training with procedure options for planning performing evaluating and documenting measurements This book by the ZEISS Metrology Academy makes a contribution towards achieving these targets Unsettled Technology Domains in Industrial Metrology Jody E. Muelaner,2019-09-27 Within manufacturing measurements are used to make decisions related to product verification and process control The selection of production machines and instruments involves a trade off to achieve the required accuracy while minimizing cost Similarly deciding on the level of confidence at which products are rejected is a trade off between the cost of rejecting acceptable parts and the cost of passing substandard products to the customer These trade offs can only be optimized if the uncertainties are fully understood Currently multiple methodologies are used to understand uncertainties and variation within manufacturing such as measurement systems analysis MSA statistical process control SPC and uncertainty evaluation The industry lacks a unified approach that provides a complete understanding of uncertainty This means that optimal decisions cannot be made to maximize the profitability of production systems NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2019003> *Using AI to Develop Sustainability Strategies for a Changing Global Economy* A.V. **Good Cascade Impactor Practices, AIM and EDA for Orally Inhaled Products** Terrence P. Tougas, Jolyon P. Mitchell, Svetlana A. Lyapustina, 2013-04-10 The purpose of this publication is to introduce a new simpler and more effective way in which to interpret pharmaceutical aerosol particle size data from orally inhaled products OIPs Currently the compendial and regulatory requirements dictate the need for measurements by full resolution multi stage cascade impactor CI a process that is demanding for the operator time consuming prone to experimental error and challenging for method transfers from one laboratory to another Furthermore we shall show that the current practice of reducing information from mass weighted aerodynamic particle size distribution APSD measurements through the use of CI stage groupings is not the most effective decision making tool for OIP quality control QC in comparison with newly introduced mutually independent efficient data analysis EDA metrics that can be derived either from full resolution or abbreviated impactor measurements AIM
