HVAC Engineer's Handbook F. Porges, 2013-05-13 In the almost sixty years since the publication of the first edition of HVAC Engineer's Handbook it has become widely known as a highly useful and definitive reference for HVAC engineers and technicians alike and those working on domestic hot and cold water services, gas supply and steam services. The 11th edition continues in the tradition of previous editions being easily transportable and therefore an integral part of the HVAC engineer or technician's daily tools. Newly updated data on natural ventilation, ventilation rates, free cooling and night time cooling make the 11th edition of the HVAC Engineer's Handbook a vital source of information. Fred Porges has worked in both the manufacturing and process industries and became a partner in a building services consultancy in 1962. He has held senior positions with design contractors and his experience covers every building service and type of building from schools to housing factories to laboratories.

Advanced Decision Making for HVAC Engineers Javad Khazaii, 2016-08-10 This book focuses on some of the most energy consuming HVAC systems, illuminating huge opportunities for energy savings in buildings that operate with these systems. The main discussion is on cutting edge decision making approaches and algorithms in decision making under uncertainty: genetic algorithms, fuzzy logic, artificial neural networks, agent based modeling and game theory. These methods are applied to HVAC systems in order to help designers select the best options among the many available pathways for designing and the building of HVAC systems and applications. The discussion further evolves to depict how the buildings of the future can incorporate these advanced decision making algorithms to become autonomous and truly smart.
