

MAIN FRAME - DESCRIPTION

1. General (Ref. Fig. 1 to 6)

- A. The main frame of the complete fuselage extends from STA672(FR1) to STA5658(FR103) for A/C 002 and from STA766 (FR1) to STA5842(FR103) for A/C 003-999, and consists of 9 fuselage sections. For detailed information refer to the following illustrations:

 - Fig. 4 Fuselage - Frames/Station Diagram
 - Fig. 5 Seat tracks - Y Reference Stations
 - Fig. 6 Pressurized Regions Diagram
- B. Each section is dealt with as a completely separate part except for the tail section which is subdivided into tail, aft pressure bulkhead and tail cone. Because of the aircraft constructional principles, all components of section 53-30-00 are dealt with on section planes in the load bearing structure. Section 53-30-00 can then be traced back to the level of Section 53-10-00 and is dealt with in sub-sections 53-11-00 to 53-19-00 (fuselage sections), 53-19-11 (aft pressure bulkhead) and 53-19-21 (tail cone).
- C. The fuselage consists of pressurized and unpressurized regions and has various contours.
- D. The main frame components are mainly produced from high strength aluminum alloys. The load bearing structure consists of sheets, forged or machined parts and extruded parts. Most skin panels are partly chemically etched.

S. Department Security, 2013-01-26 The Federal Emergency Management Agency FEMA developed this Risk Assessment A How To Guide to Mitigate Potential Terrorist Attacks Against Buildings to provide a clear flexible and comprehensive methodology to prepare a risk assessment The intended audience includes the building sciences community of architects and engineers working for private institutions building owners operators managers and State and local government officials working in the building sciences community The objective of this How To Guide is to outline methods for identifying the critical assets and functions within buildings

determining the threats to those assets and assessing the vulnerabilities associated with those threats Based on those considerations the methods presented in this How To Guide provide a means to assess the risk to the assets and to make risk based decisions on how to mitigate those risks The scope of the methods includes reducing physical damage to structural and non structural components of buildings and related infrastructure and reducing resultant casualties during conventional bomb attacks as well as chemical biological and radiological CBR agents This document is written as a How To Guide It presents five steps and multiple tasks within each step that will lead you through a process for conducting a risk assessment and selecting mitigation options It discusses what information is required to conduct a risk assessment how and where to obtain it and how to use it to calculate a risk score against each selected threat This is one of a series of publications that address security issues in high population private sector buildings This document is a companion to the Reference Manual to Mitigate Potential Terrorist Attacks Against Buildings FEMA 426 and the Building Design for Homeland Security Training Course FEMA E155 This document also leverages information contained within the Primer for Design of Commercial Buildings to Mitigate Terrorist Attacks FEMA 427 The primary use of this risk assessment methodology is for buildings although it could be adapted for other types of critical infrastructure The foundation of the risk assessment methodology presented in this document is based on the approach that was developed for the Department of Veterans Affairs VA through the National Institute for Building Sciences NIBS Over 150 buildings have been successfully assessed using this technique The risk assessment methodology presented in this publication has been refined by FEMA for this audience The purpose of this How To Guide is to provide a methodology for risk assessment to the building sciences community working for private institutions It is up to the decision makers to decide which types of threats they wish to protect against and which mitigation options are feasible and cost effective This How To Guide views as critical that a team created to assess a particular building will be composed of professionals capable of evaluating different parts of the building They should be senior individuals who have a breadth and depth of experience in the areas of civil electrical and mechanical engineering architecture site planning and security engineering and how security and antiterrorism considerations affect site and building design **Federal**
