Despite the vast amount of work building the foundations of safe operations, aviation accidents still happen and prior to many accidents and other safety-related events, there was unexpressed or ignored disquiet as the last minute approached, the last minute being that time when there is no longer time for discussion or analysis, only safety first action. This book aims at the assurance of better outcomes from these time-critical situations whose genesis lies in the time period immediately preceding the last minute. This assurance of better outcomes can best be assured by enabling operational managers to adopt new paradigms in the development of SOPs, building the right culture and implementation of training programs relevant to good decision making required as the last minute approaches. This book examines the development of the foundations for aviation safety, the things that give foundational support for safety to pilots in particular but over which line pilots may have little knowledge or day-to-day control. It provides a history of time-critical safety-related events providing the foundation for the understanding of the reasons why pilot inactivity, indifference, fixation and incapacitation can so pervade the lead up to the last minute as to leave the safe continuation of the flight resting on prompt remedial action. The role of doubt, how it is expressed and how it is heard is another central thread. Finally, the book addresses the role of flight data analysis as a valuable management tool. Written for aviation managers, line flight crews and those in similar operational roles in aviation-related operations, this book and its

informal discussion style should appeal and communicate across national age experience and language boundaries to create a safer operational environment AIP Aeronautical Information Publication, United States of America ,2007 *Aviation and International Cooperation* Ruwantissa Abeyratne,2015-05-22 This book addresses an essential gap in the regulatory regime which provides legislation statements and guidelines on airlines airports air navigation services providers and States in the field of aviation but is notably lacking when it comes to the rights of the airline passenger and the average citizen who is threatened by military air strikes It addresses subjects such as international resolutions on human rights and other human rights conventions related to aviation that impact both air transport consumers and people on the ground who are threatened by air strikes through drone attacks disabled and obese airline passengers compensation for delayed carriage and the denial of carriage noise and air pollution caused by aviation and their effects on human health and wellbeing prevention of death or injury to passengers and attendant compensatory rights risk management relief flights and racial profiling These subjects are addressed against the backdrop of real case studies that include but are not limited to instances of drone attacks and contentious flights in the year 2014 such as MH 370 MH 17 and QZ 8501 The Handbook of Human-Machine Interaction Guy A.
