R. S* ,1921 Henry Cavendish 1731 1810 was an English scientist whose published work was mostly concerned with electricity He was elected a Fellow of the Royal Society in 1760 Cavendish was a prolific scientific investigator performing experiments on not only electricity but also magnetism thermometry gases heat potential and the chemical composition of water Although he published some of his research including his discovery of hydrogen the majority of his work remained unpublished until 1879 when James Clerk Maxwell published a collection of Cavendish s electrical experiments These papers showed that Cavendish had discovered many important electrical concepts which had since been credited to other researchers including the concept of electric potential First published in 1921 these volumes are a collection of Cavendish s results from his many experiments Volume 2 contains previously unpublished papers showing the results of Cavendish s chemical magnetic and thermometry experiments *The Scientific Papers of the Honourable Henry Cavendish Volume Ii Chemical Dynamical* Henry Cavendish, **The Philosophy Of Scientific Experimentation** Hans Radder,2003-02-23 The Philosophy of Scientific Experimentation focuses on the identification and clarification of philosophical issues in experimental science Since the late 1980s the neglect of experiment by philosophers and historians of science has been replaced by a keen interest in the subject In this volume a number of prominent philosophers of experiment directly address basic theoretical questions develop existing philosophical accounts and offer novel perspectives on the subject rather than rely exclusively on historical cases of experimental practice Each essay examines one or more of six interconnected themes that run throughout the collection the philosophical implications of actively and intentionally interfering with the material world while conducting experiments issues of interpretation regarding causality the link between science and technology the role of theory in experimentation involving material and causal intervention the impact of modeling and computer simulation on experimentation and the philosophical implications of the design operation and use of scientific instruments *The Popular Science News and Boston Journal of Chemistry* ,1886 **Chemical news and Journal of physical science** ,1865

Burchard de Volder and the Age of the Scientific Revolution Andrea Strazzoni, 2019-11-18 This monograph details the entire scientific thought of an influential natural philosopher whose contributions unfortunately have become obscured by the pages of history. Readers will discover an important thinker Burchard de Volder. He was instrumental in founding the first experimental cabinet at a European University in 1675. The author goes beyond the familiar image of De Volder as a forerunner of Newtonianism in Continental Europe. He consults neglected materials including handwritten sources and takes into account new historiographical categories. His investigation maps the thought of an author who did not sit with an univocal philosophical school but critically dealt with all the major philosophers and scientists of his age from Descartes to Newton via Spinoza, Boyle, Huygens, Bernoulli, and Leibniz. It explores the way De Volder's unsystematic thought used, rejected, and reshaped their theories and approaches. In addition, the title includes transcriptions of De Volder's teaching materials, disputations, dictations, and notes. Insightful analysis combined with a trove of primary source material will help readers gain a new perspective on a thinker so far mostly ignored by scholars. They will find a thoughtful figure who engaged with early modern science and developed a place that fostered experimental philosophy.
