Formal Methods for Trustworthy Computer Systems (FM89) Karen Summerskill,Dan

Craig, 2013-11-11 The 1989 Workshop on the Assessment of Formal Methods for Trustworthy Computer Systems FM89 was an invitational workshop that brought together representatives from the research commercial and governmental spheres of Canada the United Kingdom and the United States The workshop was held in Halifax Nova Scotia Canada from July 23 through July 27 1989 This document reports the activities observations recommendations and conclusions resulting from FM89

1 Purpose of Workshop The primary purpose for holding FM89 was to assess the role of formal methods in the development and fielding of trustworthy critical systems The need for this assessment was predicated upon four observations

- 1 Critical systems are increasingly being controlled by computer systems
- 2 Existing techniques for developing assuring and certifying computer based critical systems are inadequate
- 3 Formal methods have the potential for playing the same role in the development of computer based systems as applied mathematics does for other engineering disciplines and
- 4 Formal methods have had limited impact on the development of computer based systems and supporting technologies

The goal of the workshop was to complete the following tasks

- 1 Assess the problems retarding the development of trustworthy critical systems
- 2 Determine the potential impact of applying formal methods techniques to the development of trustworthy critical systems
- 3 Determine the research and development required to facilitate a broader application of formal methods techniques
- 4

Logical Foundations for Rule-Based Systems Antoni Ligeza, 2006-01-10 The book presents logical foundations for rule based systems An attempt has been made to provide an in depth discussion of logical and other aspects of such systems including languages for knowledge representation inference mechanisms inference control design and verification The ultimate goal was to provide a deeper theoretical insight into the nature of rule based systems and put together the most complete presentation including details so frequently skipped in typical textbooks The book may be useful to a potentially wide audience but it is aimed at providing specific knowledge for graduate post graduate and Ph D students as well as knowledge engineers and research workers involved in the domain of AI It also constitutes a summary of the Author's research and experience gathered through several years of his research work

Safety of Computer Architectures Jean-Louis Boulanger, 2013-01-09 It is currently quite easy for students or designers engineers to find very general books on the various aspects of safety reliability and dependability of computer system architectures and partial treatments of the elements that comprise an effective system architecture It is not so easy to find a single source reference for all these aspects of system design However the purpose of this book is to present in a single volume a full description of all the constraints including legal contexts around performance reliability norms etc and

examples of architectures from various fields of application including railways aeronautics space automobile and industrial automation The content of the book is drawn from the experience of numerous people who are deeply immersed in the design and delivery from conception to test and validation safety analysis of safety FMEA HA etc and evaluation of critical systems The involvement of real world industrial applications is handled in such a way as to avoid problems of confidentiality and thus allows for the inclusion of new useful information photos architecture plans schematics real examples Aeronautical Engineering: A Cumulative Index to a Continuing Bibliography (supplement 274) ,1992 **Using Event-B for Critical Device Software Systems** Neeraj Kumar Singh,2013-06-19 Defining a new development life cycle methodology together with a set of associated techniques and tools to develop highly critical systems using formal techniques this book adopts a rigorous safety assessment approach explored via several layers from requirements analysis to automatic source code generation This is assessed and evaluated via a standard case study the cardiac pacemaker Additionally a formalisation of an Electrocardiogram ECG is used to identify anomalies in order to improve existing medical protocols This allows the key issue that formal methods are not currently integrated into established critical systems development processes to be discussed in a highly effective and informative way Using Event B for Critical Device Software Systems serves as a valuable resource for researchers and students of formal methods The assessment of critical systems development is applicable to all industries but engineers and physicians from the health domain will find the cardiac pacemaker case study of particular value
