This new book introduces a variety of case studies, lessons learned, and insights on what it really means to develop, implement, or manage an integrated system of systems. Integrated Vehicle Health Management Implementation and Lessons Learned brings to the reader a wide set of hands-on stories made possible by the contribution of twenty-three authors who agreed to share their experience and wisdom on how new technologies are developed and put to work. This effort was again coordinated by Dr Ian K Jennions, Director of the IVHM Centre at Cranfield University UK and editor of the previous books in the series. Integrated Vehicle Health Management Implementation and Lessons Learned with seventeen fully illustrated chapters covers diverse areas of expertise such as the impact of trust, human factors, and evidential integrity in system development. They are complemented by valuable insights on implementing APU health management, aircraft health trend monitoring, and the historical perspective of how rotorcraft HUMS Health and Usage Monitoring Systems opened doors for the adoption of this cutting-edge technology by the global commercial aviation industry.

This book compiles a number of contributions originating from the KESE Knowledge Engineering and Software Engineering workshop series from 2005 to 2015. The idea behind the series was the realignment of the knowledge engineering discipline and its strong relation to software engineering as well as to the classical aspects of artificial intelligence research. The book introduces symbiotic work combining these disciplines such as aspect-oriented and agile engineering using anti-patterns and system refinement. Furthermore, it presents successful applications from different areas that were created by combining techniques from both areas.
