

The book cover features a brown background with two photographs. The top photograph shows a close-up of a building's exterior with a corrugated metal roof and a window. The bottom photograph shows a view of a building's interior, possibly a staircase or a large hall, with a wooden railing and a large window. The title 'N2 Building Science' is prominently displayed in the center. The author's name 'J. L. Winkler, Jr. & R. W. Anderson' is at the bottom left, and the publisher's name 'Bradford's Books' is at the bottom right. A vertical label on the right side reads 'FIRST FIRST MATTER SERIES'.

Thaddeus Mason HARRIS,1803 *Digital Image Processing* Bernd Jähne,2013-06-29 This chapter centers around the question of how to represent the information contained in images Together with the next two chapters it lays the mathematical foundations for low level image processing Two key points are emphasized in this chapter First the information contained in images can be represented in entirely different ways The most important are the spatial representation Section 2 2 and wave number representation Section 2 3 These representations just look at spatial data from different points of view Since the various representations are complete and equivalent they can be converted into each other The conversion between the spatial and wave number representation is the well known Fourier transform This transform is an example of a more general class of operations the unitary transforms Section 2 4 Second we discuss how these representations can be handled with digital computers How are images represented by arrays of digital numbers in an adequate way How are these data handled efficiently Can fast algorithms be devised to convert one representation into another A key example is the fast Fourier transform discussed in Section 2 5 2 2 Spatial Representation of Digital Images 2 2 1 Pixel and Voxel Images constitute a spatial distribution of the irradiance at a plane **Resources in Education** ,2001 **Current Index to**
