Large-scale Optimization Vladimir Tsurkov, 2001-03-31 Decomposition methods aim to reduce large scale problems to simpler problems This monograph presents selected aspects of the dimension reduction problem Exact and approximate aggregations of multidimensional systems are developed and from a known model of input output balance aggregation methods are categorized The issues of loss of accuracy recovery of original variables disaggregation and compatibility conditions are analyzed in detail The method of iterative aggregation in large scale problems is studied For fixed weights successively simpler aggregated problems are solved and the convergence of their solution to that of the original problem is analyzed An introduction to block integer programming is considered Duality theory which is widely used in continuous block programming does not work for the integer problem A survey of alternative methods is presented and special attention is given to combined methods of decomposition Block problems in which the coupling variables do not enter the binding constraints are studied These models are worthwhile because they permit a decomposition with respect to primal and dual variables by two level algorithms instead of three level algorithms Audience This book is addressed to specialists in operations research optimization and optimal control

High Performance Optimization Hans Frenk, Kees Roos, Tamás Terlaky, Shuzhong Zhang, 2013-04-17

For a long time the techniques of solving linear optimization LP problems improved only marginally Fifteen years ago however a revolutionary discovery changed everything A new golden age for optimization started which is continuing up to the current time What is the cause of the excitement Techniques of linear programming formed previously an isolated body of knowledge Then suddenly a tunnel was built linking it with a rich and promising land part of which was already cultivated part of which was completely unexplored These revolutionary new techniques are now applied to solve conic linear problems This makes it possible to model and solve large classes of essentially nonlinear optimization problems as efficiently as LP problems This volume gives an overview of the latest developments of such High Performance Optimization Techniques The first part is a thorough treatment of interior point methods for semidefinite programming problems The second part reviews today's most exciting research topics and results in the area of convex optimization Audience This volume is for graduate students and researchers who are interested in modern optimization techniques
