Applied Multidimensional Scaling Springerbriefs In Statistics:

Applied Multidimensional Scaling Ingwer Borg, Patrick JF Groenen, Patrick Mair, 2012-10-30 This book introduces MDS as a psychological model and as a data analysis technique for the applied researcher. It also discusses in detail how to use two MDS programs: Proxscal, a module of SPSS, and Smacof, an R package. The book is unique in its orientation on the applied researcher whose primary interest is in using MDS as a tool to build substantive theories. This is done by emphasizing practical issues such as evaluating model fit by presenting ways to enforce theoretical expectations on the MDS solution and by discussing typical mistakes that MDS users tend to make. The primary audience of this book are psychologists, social scientists, and market researchers. No particular background knowledge is required beyond a basic knowledge of statistics.

Applied Multidimensional Scaling and Unfolding Ingwer Borg, Patrick J.F. Groenen, Patrick Mair, 2018-05-16 This book introduces multidimensional scaling (MDS) and unfolding as data analysis techniques for applied researchers. MDS is used for the analysis of proximity data on a set of objects representing the data as distances between points in a geometric space, usually of two dimensions. Unfolding is a related method that maps preference data, typically evaluative ratings of different persons on a set of objects, as distances between two sets of points representing the persons and the objects respectively. This second edition has been completely revised to reflect new developments, and the coverage of unfolding has also been substantially expanded. Intended for applied researchers whose main interests are in using these methods as tools for building substantive theories, it discusses numerous applications, classical and recent, highlights practical issues such as evaluating model fit, presents ways to enforce theoretical expectations for the scaling solutions, and addresses the typical mistakes that MDS unfolding users tend to make. Further, it shows how MDS and unfolding can be used in practical research work, primarily by using the smacof package in the R environment but also Proxscal in SPSS. It is a valuable resource for psychologists, social scientists, and market researchers with a basic understanding of multivariate statistics such as multiple regression and factor analysis.

Projective Techniques and Sort-Based Research Methods Paul M.W. Hackett, James M. Suvak, Ava Gordley-Smith, 2023-04-05 *Projective Techniques and Sort Based Research Methods* offers a brief introductory guide to the use of these exciting, innovative, and often artistic approaches to students and researchers who have no prior knowledge of these. This book brings together a wide range of examples of projective and mapping techniques that offer the ideal methodology for researchers wishing to collect less controlled and filtered material that tap the deeper levels of the conscious and sub-conscious to reveal a more profound, richer, and hidden level of response. It presents the techniques in a way that will enable the reader to appreciate their nature and to choose an appropriate method for their own research. Information is also provided that allows readers to design and implement their own projective or sort-based approaches. Each of the approaches the authors present are concisely described, and their usages explained along with references and examples of the applied usage of the technique. The book is valuable reading for researchers from a wide range of academic

disciplines from within the social sciences humanities business studies marketing etc The book is an introductory guide but it will be appropriate for use with undergraduate post graduate and research students It will also be of great use to professionals working in the areas of consumer behaviour marketing and communications

Facet Theory and the Mapping Sentence Paul M.W. Hackett,2021-03-23 This book is the second edition of Facet Theory and the Mapping Sentence

Evolving Philosophy Use and Application 2014 It consolidates the qualitative and quantitative research positions of facet theory and delves deeper into their qualitative application in psychology social and the behavioural sciences and in the humanities In their traditional quantitative guise facet theory and its mapping sentence incorporate multi dimensional statistics They are also a way of thinking systematically and thoroughly about the world The book is particularly concerned with the development of the declarative mapping sentence as a tool and an approach to qualitative research The evolution of the facet theory approach is presented along with many examples of its use in a wide variety of research domains Since the first edition the major advance in facet theory has been the formalization of the use of the declarative mapping sentence and this is given a prominent position in the new edition The book will be compelling reading for students at all levels and for academics and research professionals from the humanities social sciences and behavioural sciences

Advances in Facet Theory Research: Developments in Theory, Application and Related Approaches Paul M. W. Hackett,Yael

Fisher,2019-11-01 In this Research Topic the two editors bring together a series of articles that use facet theory and allied approaches to research Since its inception in the work of Louis Guttman in the mid twentieth century facet theory has become an established approach within social science research In addition over the past 70 years a wide range of research publications have appeared operating within the theoretical and analytic rubric of facet theory and for the last two decades a biennial international conference has been held devoted to facet theory research When using a facet theory approach an implicit aim of the research within this framework is to bring together in an explicit manner a clear definition of the content area that is being investigated along with data analysis procedures Integrating the explicit design of research content for

example attitudes values etc and its subsequent analysis for example to identify the variables that are influential to respondents in relation to the specific area under investigation allows for the construction of theory relating to the content area and for the meaningful measurement of complex research areas The clear explication of an area of research content is achieved through the use of a mapping sentence MS In a MS all of the pertinent variables called facets associated with the specific subject matter of the research study are specified in the form of a natural language sentence where facets variables are arranged to demonstrate how these theoretically relate to each other Sub levels of facets are defined in such a way as to capture the relationships of research variables facets to each other and the overall research domain Background variables are also stated in the MS along with a specified range over which observations will be made to test the veracity of the structural hypotheses statements regarding the proposed manner in which variables are related to the study's content implicit in the MS Furthermore by using a MS the researcher is able to select variables that appropriately address the area of content Traditionally facet theory has been used in quantitative research but has recently been applied to the analysis of qualitative and philosophical research which incorporates a declarative mapping sentence in such research and which is included in this Research Topic In order to interrogate these structural hypotheses quantitative data analysis procedures are employed such as Smallest Space Analysis SSA and Partial Order Scalogram Analysis by base Coordinates POSAC In SSA the structure of the content area of interest the variables that have been included in the MS can be interrogated as observations that have been made along the specified outcome range are represented geometrically as partitioned regions in a concept space related to the specific research domain Individual respondents may also be investigated in terms of their profile of facet related scores using POSAC A similar approach is employed when analysing information from qualitative facet theory research which interrogates the structural hypotheses present in the declarative mapping sentence through approaches such as content and narrative analyses This Research Topic presents work from scholars with particular emphasis upon how the approach has developed both theoretically and in terms of its application new areas of application and advances in theory development

Data Science Francesco Palumbo, Angela Montanari, Maurizio Vichi, 2017-07-04 This edited volume on the latest advances in data science covers a wide range of topics in the context of data analysis and classification In particular it includes contributions on classification methods for high dimensional data clustering methods multivariate statistical methods and various applications The book gathers a selection of peer reviewed contributions presented at the Fifteenth Conference of the International Federation of Classification Societies IFCS2015 which was hosted by the Alma Mater Studiorum University of Bologna from July 5 to 8 2015
