Algebra Geometry And Software Systems:

Algebra, Geometry and Software Systems Michael Joswig, Nobuki Takayama, 2013-03-14 In many fields of modern mathematics specialised scientific software becomes increasingly important Hence tremendous effort is taken by numerous groups all over the world to develop appropriate solutions This book contains surveys and research papers on mathematical software and algorithms The common thread is that the field of mathematical applications lies on the border between algebra and geometry Topics include polyhedral geometry elimination theory algebraic surfaces Gr bner bases triangulations of point sets and the mutual relationship This diversity is accompanied by the abundance of available software systems which often handle only special mathematical aspects Therefore the volume s other focus is on solutions towards the integration of mathematical software systems This includes low level and XML based high level communication channels as well as general framework for modular systems

Software for Algebraic Geometry Michael E. Stillman, Nobuki Takayama, Jan Verschelde, 2008-05-29 Algorithms in algebraic geometry go hand in hand with software packages that implement them Together they have established the modern field of computational algebraic geometry which has come to play a major role in both theoretical advances and applications Over the past fifteen years several excellent general purpose packages for computations in algebraic geometry have been developed such as CoCoA Singular and Macaulay 2 While these packages evolve continuously incorporating new mathematical advances they both motivate and demand the creation of new mathematics and smarter algorithms This volume reflects the workshop Software for Algebraic Geometry held in the week from 23 to 27 October 2006 as the second workshop in the thematic year on Applications of Algebraic Geometry at the IMA The papers in this volume describe the software packages Bertini PHClab Gfan DEMiCs SYNAPS TrIm Gambit ApaTools and the application of Risa Asir to a conjecture on multiple zeta values They offer the reader a broad view of current trends in computational algebraic geometry through software development and applications

Topics in Algebraic Geometry and Geometric Modeling Ron Goldman, Rimvydas Krasauskas, 2003 Algebraic geometry and geometric modeling both deal with curves and surfaces generated by polynomial equations Algebraic geometry investigates the theoretical properties of polynomial curves and surfaces geometric modeling uses polynomial piecewise polynomial and rational curves and surfaces to build computer models of mechanical components and assemblies for industrial design and manufacture The NSF sponsored the four day Vilnius Workshop on Algebraic Geometry and Geometric Modeling which brought together some of the top experts in the two research communities to examine a wide range of topics of interest to both fields This volume is

an outgrowth of that workshop Included are surveys tutorials and research papers In addition the editors have included a translation of Minding s 1841 paper On the determination of the degree of an equations obtained by elimination which foreshadows the modern application of mixed volumes in algebraic geometry The volume is suitable for mathematicians computer scientists and engineers interested in applications of algebraic geometry to geometric modeling **Algebraic and Geometric Methods in Statistics** Paolo Gibilisco,2010 This up to date account of algebraic statistics and information geometry explores the emerging connections between the two disciplines demonstrating how they can be used in design of experiments and how they benefit our understanding of statistical models in particular exponential models This book presents a new way of approaching classical statistical problems and raises scientific questions that would never have been considered without the interaction of these two disciplines Beginning with a brief introduction to each area using simple illustrative examples the book then proceeds with a collection of reviews and some new results written by leading researchers in their respective fields Part III dwells in both classical and quantum information geometry containing surveys of key results and new material Finally Part IV provides examples of the interplay between algebraic statistics and information geometry Computer code and proofs are also available online where key examples are developed in further detail

including robotics control theory economics physics numerical PDEs and computational chemistry Randomization, Relaxation, and Complexity in Polynomial Equation Solving Leonid Gurvits, 2011 This volume corresponds to the Banff International Research Station Workshop on Randomization Relaxation and Complexity held from February 28 March 5 2010 It contains a sample of advanced algorithmic techniques underpinning the solution of systems of polynomial equations The papers are written by leading experts in algorithmic algebraic geometry and examine core topics Algebraic Geometry Gerrit Hayson, In the grand tapestry of mathematics few subjects weave together abstract thought and visual intuition as elegantly as algebraic geometry This field represents one of humanity's most ambitious intellectual achievements the creation of a bridge between the symbolic world of algebra and the spatial realm of geometry To understand algebraic geometry is to witness the profound unity that underlies seemingly disparate mathematical concepts The journey begins with a simple yet revolutionary idea Every polynomial equation corresponds to a geometric shape and conversely every geometric shape can be described through algebraic equations Consider the humble equation $x^2 + y^2 = 1$ To an algebraist this represents a relationship between variables a constraint that solutions must satisfy To a geometer it describes a perfect circle centered at the origin with radius one Algebraic geometry recognizes that these are not two different mathematical objects but rather two perspectives on the same fundamental entity This duality extends far beyond simple circles The equation $y = x^2$ defines a parabola while $y = x^3$ describes a cubic curve with a distinctive cusp More complex polynomial equations generate increasingly intricate curves and surfaces each possessing both algebraic properties derived from the equations and geometric properties visible to the eye The genius of algebraic geometry lies in its ability to translate problems from one domain to the other using whichever approach offers the clearest path to understanding **Formal Algorithmic Elimination for PDEs** Daniel Robertz, 2014-10-13 Investigating the correspondence between systems of partial differential equations and their analytic solutions using a formal approach this monograph presents algorithms to determine the set of analytic solutions of such a system and conversely to find differential equations whose set of solutions coincides with a given parametrized set of analytic functions After giving a detailed introduction to Janet bases and Thomas decomposition the problem of finding an implicit description of certain sets of analytic functions in terms of differential equations is addressed Effective methods of varying generality are developed to solve the differential elimination problems that arise in this context In particular it is demonstrated how the symbolic solution of partial differential equations profits from the study of the implicitization problem For instance certain families of exact solutions of the Navier Stokes equations can be computed *The Numerical Solution of Systems of Polynomials Arising in Engineering and Science* Andrew John Sommese, Charles Weldon Wampler (II.), 2005 Written by the founders of the new and expanding field of numerical algebraic geometry this is the first book that uses an algebraic geometric approach to the numerical solution of polynomial systems and also the first one to treat numerical methods for finding positive dimensional solution sets The text covers the full theory from methods developed for isolated

solutions in the 1980 s to the most recent research on positive dimensional sets Geometry at the Frontier: Symmetries and Moduli Spaces of Algebraic Varieties Paola Comparin, Eduardo Esteves, Herbert Lange, Sebastián Reyes-Carocca, Rubí E. Rodríguez, 2021-04-23 Articles in this volume are based on lectures given at three conferences on Geometry at the Frontier held at the Universidad de la Frontera Puc n Chile in 2016 2017 and 2018 The papers cover recent developments on the theory of algebraic varieties in particular of their automorphism groups and moduli spaces They will be of interest to anyone working in the area as well as young mathematicians and students interested in complex and algebraic geometry
