Applying Quantitative Bias Analysis to Epidemiologic Data Matthew P. Fox, Richard F. MacLehose, Timothy L. Lash, 2022-03-24 This textbook and guide focuses on methodologies for bias analysis in epidemiology and public health not only providing updates to the first edition but also further developing methods and adding new advanced methods As computational power available to analysts has improved and epidemiologic problems have become more advanced missing data Bayes and empirical methods have become more commonly used This new edition features updated examples throughout and adds coverage addressing Measurement error pertaining to continuous and polytomous variables Methods surrounding person time rate data Bias analysis using missing data empirical likelihood and Bayes methods A unique feature of this revision is its section on best practices for implementing presenting and interpreting bias analyses Pedagogically the text guides students and professionals through the planning stages of bias analysis including the design of validation studies and the collection of validity data from other sources Three chapters present methods for corrections to address selection bias uncontrolled confounding and measurement errors and subsequent sections extend these methods to probabilistic bias analysis missing data methods likelihood based approaches Bayesian methods and best practices

Applying Quantitative Bias Analysis to Epidemiologic Data Timothy L. Lash, Matthew P. Fox, Aliza K. Fink, 2011-04-14 Bias analysis quantifies the influence of systematic error on an epidemiology study's estimate of association The fundamental methods of bias analysis in epidemiology have been well described for decades yet are seldom applied in published presentations of epidemiologic research More recent advances in bias analysis such as probabilistic bias analysis appear even more rarely We suspect that there are both supply side and demand side explanations for the scarcity of bias analysis On the demand side journal reviewers and editors seldom request that authors address systematic error aside from listing them as limitations of their particular study This listing is often accompanied by explanations for why the limitations should not pose much concern On the supply side methods for bias analysis receive little attention in most epidemiology curriculums are often scattered throughout textbooks or absent from them altogether and cannot be implemented easily using standard statistical computing software Our objective in this text is to reduce these supply side barriers with the hope that demand for quantitative bias analysis will follow

Design and Analysis of Vaccine Studies M. Elizabeth Halloran, Ira M. Longini, Jr., Claudio J. Struchiner, 2009-10-27 As well as being a reference for the design analysis and interpretation of vaccine studies the text covers all design and analysis stages from vaccine development to post licensure surveillance presenting likelihood frequentists and Bayesian approaches

Fox,Simoneta Negrete-Yankelevich,Vinicio J. Sosa,2015 The application and interpretation of statistics are central to ecological study and practice Ecologists are now asking more sophisticated questions than in the past These new questions together with the continued growth of computing power and the availability of new software have created a new generation of statistical techniques These have resulted in major recent developments in both our understanding and practice of ecological statistics This novel book synthesizes a number of these changes addressing key approaches and issues that tend to be overlooked in other books such as missing censored data correlation structure of data heterogeneous data and complex causal relationships These issues characterize a large proportion of ecological data but most ecologists training in traditional statistics simply does not provide them with adequate preparation to handle the associated challenges Uniquely Ecological Statistics highlights the underlying links among many statistical approaches that attempt to tackle these issues In particular it gives readers an introduction to approaches to inference likelihoods generalized linear mixed models spatially or

phylogenetically structured data and data synthesis with a strong emphasis on conceptual understanding and subsequent application to data analysis Written by a team of practicing ecologists mathematical explanations have been kept to the minimum necessary This user friendly textbook will be suitable for graduate students researchers and practitioners in the fields of ecology evolution environmental studies and computational biology who are interested in updating their statistical tool kits A companion web site provides example data sets and commented code in the R language
