Miller, Christina F. Rusnock, 2024-08-28 This book departs from the assumption that Artificial Intelligence AI systems will provide a maximum advantage by replacing human cognitive processing Instead this book subscribes to the assumption that AI systems will provide a maximal advantage when the system is specifically designed to augment human intelligence It provides methods for designing effective systems that include one or more humans and one or more AI entities and uses the approach that assumes automation does not replace human activity but fundamentally changes the structure of human work when AI is added to existing systems Integrating Artificial and Human Intelligence through Agent Oriented Systems Design discusses the potential impact of AI on human work and life and explores why teamwork is necessary today for complex work environments The book explains the processes and methods humans employ to effectively team with one another and presents the elements of artificial agents that permit them to function as team members in joint

human and artificial teams It discusses design goals and illustrates how the methods that have been used to model the complex interactions among human and artificial agents can be expanded to enable the design of interaction between them to make possible the attainment of the shared goals Model Based Systems Engineering MBSE tools that provide logical designs of human agent teams the AI within these teams training to be deployed for human and artificial agent team members and the interfaces between human and artificial agent team members are all covered MBSE files containing profiles and examples for building MBSE models used in the design approach are featured on the author s website <https://lodesterresci.com> hat This book is an ideal read for students professors engineers and project managers associated with designing and developing AI systems or systems that seek to incorporate AI Software Process Improvement Pekka Abrahamsson,Nathan Baddoo,Tiziana Margaria,Richard Messnarz,2007-09-13 This book constitutes the refereed proceeding of the 14th European Software Process Improvement Conference EuroSPI 2007 held in Potsdam Germany in September 2007 The papers are organized in topical sections on enforcement alignment tailoring There is focus on SME issues improvement analysis and empirical studies new avenues of SPI SPI methodologies as well as testing and reliability **Encyclopedia of Information Science and Technology** Mehdi Khosrow-Pour,Mehdi Khosrowpour,2009 This set of books represents a detailed compendium of authoritative research based entries that define the contemporary state of knowledge on technology Provided by publisher **Interdisciplinary Research in Technology and Management** Satyajit Chakrabarti,Ashiq A. Sakib,Rohit Singh,Pradipta Kumar Banerji,Sanghamitra Poddar,Anupam Bhattacharya,Malay Gangopadhyaya,Srijita Chakraborty,2023-07-27 We live in an inter connected world In the era of Industry 4 0 technology is getting embedded more and more in the way we learn live work and play This progression is accelerating at a pace never seen before Interdisciplinary and collaborative research across disciplines within the Technology domain and Management domain and across the Technology Management interface is opening up exciting new possibilities for solving problems whose solutions are beyond the scope of a single discipline domain or practice and helping to create a brave new world The goal of this conference was to bring together scholars researchers consultants and practitioners to share their interdisciplinary research and consultative work in Technology and Management Selected papers were then peer reviewed and authors were invited to present their work in the conference An Integrated Formal Task Specification Method for Smart Environments Maik Wurdel,2011 This thesis is concerned with the development of interactive systems for smart environments One of the characteristic of smart environments is the need to support different interaction paradigms at runtime On the one hand interaction is performed explicitly the user performs an action in order to interact with the system e g pressing a button to adjust the light On the other hand actions of the user are interpreted by the smart environment even though they have not been performed primarily to interact with the system implicit interactions e g walking to the speaker s desk to give a talk A smart environment tries to infer those interactions to assist the user in her work e g display slides at the projection canvas

Both interaction paradigms originate from different research fields and are currently treated independently although implicit and explicit interaction mutually influence each other and occur interleaved. The thesis introduces a task modeling language in order to cope with the given requirements of smart environments which can be used to perform interaction development for smart environments in a model based fashion for both interaction paradigms.
