

Part II: Answer all questions in this part. Each correct answer will receive 2 credits. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. For all questions in this part, a numerical answer with no work shown will receive only 1 credit.

12. The results of a poll of 200 students are shown in the table below:

	Preferred Music Style		
	Rockers	Pop	Country
Female	14	25	27
Male	24	40	28

For this group of students, do these data suggest that gender and preferred music style are independent of each other? Justify your answer.

$$P(F \text{ and } T) = .27 \neq \\ P(F) \cdot P(T) = .24$$

$$\frac{27}{200} \neq \frac{58}{200} \cdot \frac{24}{200}$$

No

(use any combo)

$$P(F|T) = .6 \neq \\ P(F) = .53$$

$$\frac{58}{90} \neq \frac{100}{200}$$

13. The accompanying Venn diagram shows the results of a survey asking 100 people if they got their news by reading newspaper or by the internet.

$$\begin{array}{r} 100 \\ - 80 \\ \hline \end{array}$$

20 neither

What is the probability that a person selected at random from this survey does not claim the internet as a source of getting the news? Show how you arrived at your answer.

15 newspaper only
20 neither

$$\frac{35}{100} = .35 = 35\%$$

65% internet
So, 35% no int

developments in the theory of generalized harmonic analysis and its applications It is well known that convolutions differential operators and diffusion processes are interconnected the ordinary convolution commutes with the Laplacian and the law of Brownian motion has a convolution semigroup property with respect to the ordinary convolution Seeking to generalize this useful connection and also motivated by its probabilistic applications the book focuses on the following question given a diffusion process X_t on a metric space E can we construct a convolution like operator on the space of probability measures on E with respect to which the law of X_t has the convolution semigroup property A detailed analysis highlights the connection between the construction of convolution like structures and disciplines such as stochastic processes ordinary and partial differential equations spectral theory special functions and integral transforms The book will be valuable for graduate students and researchers interested in the intersections between harmonic analysis probability theory and differential equations
