Smith, Roderick A. Munro, Ronald J. Bowen, 2004 **Measuring Strategies in Tactile Coordinate Metrology** Robert Roithmeier, 2014-10-24

Today there is hardly any workpiece whose form parameters cannot be measured by means of coordinate measuring machines The universal use of these machines allows a wide range of application of this technology which however increases inevitably the complexity of its handling The numerous options of the machine specific operating software on the one hand and the various theoretical considerations regarding a target oriented treatment of measuring jobs on the other hand result

in the fact that the measuring results obtained from the same coordinate measuring machine on the same workpiece under similar conditions may differ. In order to increase the comparability of measuring results it is necessary to provide the operators of coordinate measuring machines in addition to a well founded AUKOM training with procedure options for planning performing evaluating and documenting measurements. This book by the ZEISS Metrology Academy makes a contribution towards achieving these targets.

Metrology Jody E. Muelaner,2019-09-27 Within manufacturing measurements are used to make decisions related to product verification and process control The selection of production machines and instruments involves a trade off to achieve the required accuracy while minimizing cost Similarly deciding on the level of confidence at which products are rejected is a trade off between the cost of rejecting acceptable parts and the cost of passing substandard products to the customer These trade offs can only be optimized if the uncertainties are fully understood Currently multiple methodologies are used to understand uncertainties and variation within manufacturing such as measurement systems analysis MSA statistical process control SPC and uncertainty evaluation The industry lacks a unified approach that provides a complete understanding of uncertainty This means that optimal decisions cannot be made to maximize the profitability of production systems NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2019003> **Handbook of Optical Systems, Volume 5** Bernd Dörband,Henriette Möller,Herbert Gross,2012-05-14 The state of the art full colored handbook gives a comprehensive introduction to the principles and the practice of calculation layout and understanding of optical systems and lens design Written by reputed industrial experts in the field this text introduces the user to the basic properties of optical systems aberration theory classification and characterization of systems advanced simulation models measuring of system quality and manufacturing issues In this Volume Volume 5 topics comprise the methods of measuring the properties of optical systems The different fundamental techniques such as propagation measurement and polarimetry are introduced and discussed in detail and clarity The presentation allows the reader after having devised an optical system to perform the measurements best suited to ascertain that the system fulfills the specific needs and requirements The following chapters provide a survey on materials coatings and surfaces of optical components and combine this with a treatment of light and radiation The book thus serves as a one stop reference for metrology of optical systems Other Volumes Volume 1 Fundamentals of Technical Optics Volume 2 Physical Image Formation Volume 3 Aberration Theory and Correction of Optical Systems Volume 4 Survey of Optical Instruments
