Air Pollution And Health Rsc Issues In Environmental Science And Technology:

Chemicals in the Environment Ronald E. Hester, R. M. Harrison, Roy M. Harrison, 2006 Rising concern in recent years over the possible adverse environmental consequences of the use of chemicals has led to a steady increase in national activity towards greater regulation as well as voluntary agreements with manufacturers for risk management of certain products This book begins by reviewing the current framework of legislation for the regulation of chemicals in the UK and then reports expert views on both the current situation and possible future developments Subsequent chapters consider some of the scientific and technical issues including the evaluation of the risks which chemicals can pose to human life and the environment and the problems relating to evaluating the risks associated with metals in the environment Finally the predictive methods used to model the behaviour of organic chemicals within the environment are described Highly topical and with authoritative contributions from international experts this book covers both the scientific underpinning and the legislative and practical issues of this emotive subject The detailed coverage of a topic that affects many sectors of industry and society will make it popular with a wide audience of individuals from government organisations industry or academic research particularly those in environmental chemistry sectors Environmental Impacts of Modern Agriculture Ronald E. Hester, Roy M. Harrison, 2012 Modern agriculture must seek to feed the world's growing population with little or no cost to the Environment Modern agriculture is capable of producing greater yields than ever before but intensification of agriculture does come at a price This comprehensive volume examines the environmental impact made by agriculture in the 21st Century looking forward to the future with the lessons of the past Key chapters include impacts of agriculture upon soil quality greenhouse gas budgets water borne pathogens surface water chemistry groundwater agricultural pesticides and the environment balancing the environmental consequences of agriculture with the needs for food security and positive and negative aspects of agricultural production of biofuels A fundamental reference for advanced students researchers practitioners and policy makers working in the field or related areas *Agricultural Chemicals and the Environment* Professor R E Hester, Professor R M Harrison, 2017 Integrating technologies to minimize environmental impacts Laura L McConnell Iain D Kelly and Russell L Jones The environmental impact of fertiliser nutrients on freshwater Richard W McDowell Paul J A Withers and Tony J van der Weerden Pesticides Steven Bailey John P H Reade Alastair Burn and Susan Zappala Agroecology and organic farming as approaches to reducing the environmental impacts of agricultural chemicals Nicolas H Lampkin Jo Smith and Laurence G Smith Crop biotechnology for weed and insect control Huw D Jones Aquaculture Colin F Moffat Horticulture Rosemary H Collier Jerry V Cross and Xiangming Xu *Environmental Impacts of Road Vehicles* R M Harrison, R E Hester, 2017-06-16 The first concerns that come to mind in relation to pollution from road vehicles are direct emissions of carbon dioxide and toxic air pollutants These are of course important but the impacts of road traffic are altogether more substantial This volume of the Issues in Environmental Science and Technology Series takes a broader view

of the effects on the environment and human health excluding only injury due to road traffic accidents By looking across the environmental media air water and soil and taking account also of noise pollution the volume addresses far more than the conventional atmospheric issues More importantly however it examines present and future vehicle technologies the implications of more extensive use of batteries in electric vehicles and the consequences of recycling vehicles at the end of use Finally examples of life cycle analysis as applied to road vehicles are reviewed This book is a comprehensive source of authoritative information for students studying pollution and for policy makers concerned with vehicle emissions and road traffic impacts more generally *Energy Storage Options and Their Environmental Impact* R. E. Hester, R. M.

Harrison, 2018-10-22 The growth of renewable energy technologies mainly wind and solar demands the development of practical and economically viable energy storage technologies This book explores the current state of the art of large scale energy storage and examines the likely environmental impacts of the main categories based on the types of energy stored

Endocrine Disrupting Chemicals Roy M. Harrison, Ronald E. Hester, 1999 Long term environmental effects of chemical exposure have long been of concern and more recently chemicals which cause changes to the sexual development of exposed organisms have been identified It is thought that low level exposure to a wide range of chemicals may be affecting endocrine function leading to a reduction in fertility and an increase in reproductive cancers Endocrine Disrupting Chemicals reviews the scientific evidence and attempts to put the subject into context Along with an overview of the issue there is discussion of the specialised aspects in relation to wildlife environmental oestrogens and male reproduction and naturally occurring oestrogenic substances With contributions from representatives of the Medical Research Council's Institute for Environment and Health and the US Environmental Protection Agency the articles provide a comprehensive and detailed review of current issues This book will be of interest to a wide readership including industrial and environmental scientists managers and policy makers **Assessment and Reclamation of Contaminated Land** Ronald E. Hester, Roy M. Harrison, 2001

Contaminated land and the methods and legal controls governing its reclamation for subsequent development and use are of great current interest and concern This volume covers aspects of this subject ranging from the origins and extent of contaminated land problems including effects on human health through investigative measures to specific techniques of remediation It is written in the context of the new UK contaminated land regime and includes human and ecological risk assessment methodology and the legal liabilities and insurance aspects of contaminated land This authoritative review will be welcomed by those involved in the areas of land use planning and development consultants and engineers in contaminated site investigation and remediation and environmental regulators Students of land management and environmental science will also find it essential reading **Geoengineering of the Climate System** Roy Harrison, Ron Hester, 2014-05-30 It is generally accepted within the scientific community that anthropogenic emissions of greenhouse gases are primarily responsible for a recent warming in global climate and that current trajectories of emissions may lead to potentially

catastrophic changes in climate While reduction in emissions of greenhouse gases and particularly carbon dioxide could lead to a stabilisation of global temperatures this requires international agreements which have yet to be achieved A possible alternative which has been widely mooted is to use methods known as geoengineering as an alternative way of limiting increases in global temperature Geoengineering techniques fall into two main categories of carbon dioxide removal and solar radiation management within each of these there are a number of options Following on from Carbon Capture volume 29 in this series Geoengineering of the Climate System presents an overview of the technologies currently being considered as large scale solutions to climate change and considers some of the possible benefits and disadvantages of each Invited contributions have been received by many of the leading experts on these technologies and the volume provides a comprehensive overview of both carbon dioxide reduction and solar radiation management methods These give rise to important ethical and governance issues which are also explored Written with active researchers postgraduate students and policy makers in mind the latest addition to the Issues in Environmental Science Technology series presents a balanced and informed view of this important field of research and is an essential addition to any environmental science library

Chemistry in the Marine Environment Roy M. Harrison, Ronald E. Hester, 2000 The oceans cover more than 70% of the earth's surface to an average depth of almost 4000 metres It is therefore not surprising that exchanges that occur between ocean and atmosphere exert major influences on the global climate In addition there is great variety within the expanses of the ocean including large temperature differences and enormous biodiversity brought about by the great chemical diversity within the marine environment Written by international experts in the field Chemistry in the Marine Environment offers a multidisciplinary and authoritative review of this important topic Included is a review of the opportunities and challenges in developing new pharmaceuticals from the sea and an examination of contamination and pollution in the marine environment which is a cause of great concern world wide The international perspective of this book will engage the interest and attention of a wide readership from chemical oceanographers to policymakers from students in environmental science to those in oceanography programmes

Causes and Environmental Implications of Increased UV-B Radiation Roy M. Harrison, Ronald E. Hester, 2000 Annotation While the enlarging hole in the Antarctic ozone layer is inherently a fascinating phenomena we also need to understand the environmental hazard against which we are counting on stratospheric ozone to protect us ultraviolet radiation In six papers contributors summarize what is known about the effects of the UV B portion of the spectrum e g on skin cancer and assess future trends Hester is a chemistry professor with the U of York Harrison is professor of environmental health at the U of Birmingham Distributed in the US by Springer Verlag Annotation c Book News Inc Portland OR booknews com

Pharmaceuticals in the Environment R E Hester, R M Harrison, 2015-08-27 Medicines play an important role in the treatment and prevention of disease in humans and animals but residues from these medicines can be released into the environment through a number of routes during their manufacture use and disposal It is only recently that

the potential environmental impacts of this exposure to pharmaceuticals are being considered The book explores where pharmaceutical residues can be found e g in surface waters drinking water sediments and the marine environment the sources of these residues from manufacture through to disposal of unused medicines how these residues break down and how this all impacts on wildlife and human health In reviewing the current position and examining further possible impacts this book is an important reference for researchers working in the pharmaceutical industry as well as for environmentalists policy makers and students on pharmacy and environmental science courses wanting to better understand the impacts of pharmaceuticals on the environment
