California Agricultural Research Priorities National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on California Agricultural Research Priorities: Pierce's Disease, 2004-10-28 The glassy winged sharpshooter is one of the more recent invasive pests to afflict California agriculture The insect transmits a bacterial pathogen that causes Pierce s disease which

has impaired production of wine table and raisin grapes in California The report recommends strengthening the process and the priorities for research funded by state agencies and wine industry groups to address Pierce s disease and its vector Research should be focused on identifying feasible options for controlling the spread of the disease and providing sustainable approaches that are adaptable and affordable over the long term Several avenues of research be pursued more intensely including the genetic makeup of the pathogen that triggers Pierce s disease understanding the mechanisms that make grapes resistant to the disease the possibilities of introducing predator enemies to the sharpshooter and new ways to manage the planting of crops to help avoid spread of the disease

Concentrated Animal Feeding Operations: EPA Needs More Information and a Clearly Defined Strategy to Protect Air and Water Quality Anu K. Mittal,2009-02 Concentrated animal feeding operations CAFO are large livestock and poultry operations that raise animals in a confined situation CAFOs may improve the efficiency of animal production but the large amounts of manure they produce can if improperly managed degrade air and water quality The EPA requires CAFOs that discharge certain pollutants to obtain a permit This testimony summarizes the findings of a Sept 4 2008 report on 1 trends in CAFOs 2 amounts of waste they generate 3 findings of key research on CAFOs health and environmental impacts 4 progress made in developing CAFO air emissions protocols and 5 the effect of recent court decisions on EPA s regulation of CAFO water pollutants

Biological Confinement of Genetically Engineered Organisms National Research Council,Division on Earth and Life Studies,Board on Life Sciences,Board on Agriculture and Natural Resources,Committee on Biological Confinement of Genetically Engineered Organisms,2004-02-20 Genetically engineered organisms GEOs have been under development for more than 20 years while GE crops have been grown commercially during the last decade During this time a number of questions have cropped up concerning the potential consequences that certain GEOs might have on natural or managed ecosystems and human health Interest in developing methods to confine some GEOs and their transgenes to specifically designated release settings has increased and the success of these efforts could facilitate the continued growth and development of this technology Biological Confinement of Genetically Engineered Organisms examines biological methods that may be used with genetically engineered plants animals microbes and fungi Bioconfinement methods have been applied successfully to a few non engineered organisms but many promising techniques remain in the conceptual and experimental stages of development This book reviews and evaluates these methods discusses when and why to consider their use and assesses how effectively they offer a significant reduction of the risks engineered organisms can present to the environment Interdisciplinary research to develop new confinement methods could find ways to minimize the potential for unintended effects on human health and the environment Need for this type of research is clear and successful methods could prove helpful in promoting regulatory approval for commercialization of future genetically engineered organisms

Research Handbook on Climate Change and Agricultural Law Mary Jane Angelo,Anél Du Plessis,2017-03-31 *Research Handbook on Climate Change and Agricultural Law*

Animals and the

Environment Lisa Kemmerer, 2015-05-01 Contemporary Earth and animal activists rarely collaborate perhaps because environmentalists focus on species and ecosystems while animal advocates look to the individual and neither seems to have much respect for the other This diverse collection of essays highlights common ground between earth and animal advocates most notably the protection of wildlife and personal dietary choice If earth and animal advocates move beyond philosophical differences and resultant divergent priorities turning attention to shared goals both will be more effective and both animals and the environment will benefit Given the undeniable seriousness of the environmental problems that we face including climate change and species extinction it is essential that activists join forces Drawing on a wide range of issues and disciplines ranging from wildlife management hunting and the work of NGOs to ethics ecofeminism religion and animal welfare this volume provides a stimulating collection of ideas and challenges for anyone else who cares about the environment or animals
