Computational Methods and Experimental Measurements XVII G.M. Carlomagno,D. Poljak,C.A. Brebbia,2015-05-05 Containing papers presented at the seventeenth in a series of biennial meetings organised by the Wessex Institute and first held in 1984 this book includes the latest research from scientists who perform experiments researchers who develop computer codes and those who carry out measurements on prototypes and whose work may interact Progress in the engineering sciences is dependent on the orderly and concurrent development of all three fields Continuous improvement in computer efficiency coupled with diminishing costs and rapid development of numerical procedures have generated an ever increasing expansion of computational simulations that permeate all fields of science and technology As these procedures continue to grow in magnitude and complexity it is essential to be certain of their reliability i e to validate their results This can be achieved by performing dedicated and accurate experiments At the same time current experimental techniques have become more complex and sophisticated so that they require the exploitation of computers both for running experiments as well as acquiring and processing the resulting data The papers contained in the book address advances in the interaction between these three areas They cover such topics as Computational and Experimental Methods Fluid Flow Structural and Stress Analysis Materials Characterisation Heat Transfer and Thermal Processes Advances in Computational Methods Automotive Applications Applications in Industry Process Simulations Environmental Modelling and Applications Computer Modelling Validation of Computer Modelling Computation in Measurements Data Processing of Experiments Virtual Testing and Verification Simulation and Forecasting Measurements in Engineering

Surface Plasmon Resonance Sensors Leiva Casemiro Oliveira,Antonio Marcus Nogueira Lima,Carsten Thirstrup,Helmut Franz Neff,2019-06-13 This significantly extended second edition addresses the important physical phenomenon of Surface Plasmon Resonance SPR or Surface Plasmon Polaritons SPP in thin metal films a phenomenon which is exploited in the design of a large variety of physico chemical optical sensors In this treatment crucial materials aspects for design and optimization of SPR sensors are investigated and described in detail The text covers a

selection of nanometer thin metal films ranging from free electron to the platinum type conductors along with their combination with a large variety of dielectric substrate materials and associated individual layer and opto geometric arrangements Whereas the first edition treated solely the metal liquid interface the SP resonance conditions considered here are expanded to cover the metal gas interface in the angular and wavelength interrogation modes localized and long range SP s and the influence of native oxidic ad layers in the case of non noble metals Furthermore a selection of metal grating structures that allow SP excitation is presented as are features of radiative SP s Finally this treatise includes as yet hardly explored SPR features of selected metal metal and metal dielectric superlattices An in depth multilayer Fresnel evaluation provides the mathematical tool for this optical analysis which otherwise relies solely on experimentally determined electro optical materials parameters **EDN**, 2007 *MEMS and Nanotechnology, Volume 5* Gordon Shaw III, Barton C. Prorok, LaVern Starman, Cosme Furlong, 2025-08-07 *MEMS and Nanotechnology Volume 5 Proceedings of the 2013 Annual Conference on Experimental and Applied Mechanics* the fifth volume of eight from the Conference brings together contributions to this important area of research and engineering The collection presents early findings and case studies on a wide range of areas including Microelectronics Packaging Single Atom Molecule Mechanical Testing MEMS Devices Fabrication In Situ Mechanical Testing Nanoindentation Experimental Analysis of Low Dimensional Materials for Nanotechnology International RILEM Conference on Synergising Expertise towards Sustainability and Robustness of Cement-based Materials and Concrete Structures Agnieszka Jędrzejewska, Fragkoulis Kanavaris, Miguel Azenha, Farid Benboudjema, Dirk Schlicke, 2023-06-10 This book highlights the latest advances innovations and applications in cement based materials CBM and concrete structures as presented by leading international researchers and engineers at the International RILEM Conference on synergizing expertise toward sustainability and robustness of CBM and concrete structures SynerCrete held in Milos Island Greece on June 14 16 2023 The aim of the conference was to discuss and arouse progress in research development and application of CBM and structural concrete through combination of expertise from distinct fields of knowledge such as performance based design 3D modeling for analysis design building information modeling and even robotics while keeping focus on multiscale approaches at time and spatial levels It covers a diverse range of topics concerning alternative concrete formulations for adaptation to climate change performance based and multiphysics multiscale design and innovative testing structural health monitoring and maintenance management integral BIM based planning and resource responsible building The contributions which were selected by means of a rigorous international peer review process present a wealth of exciting ideas that will open novel research directions and foster new multidisciplinary collaborations The two volumes encompass more than 200 original contributions in the field Energy Transition Holistic Impact Challenge (ETHIC): A New Environmental and Climatic Era George Cristian Lazaroiu, Mariacristina Roscia, Vasile Sebastian Dancu, 2024-11-12 This book states that the new environmental challenge will also have to be faced ethically

science can provide the tools but people will have to be sensitized so that they make their own environmental ethics The challenge of the new era is the environment and therefore the climate as it does not start outside of us but as a constituent element of our life and therefore lived ethically The new vision proposed in this book is to push technology together with the human being in assuming environmentally ethical behaviors this is the greatest collective action of humanity Sustainable development has allowed an integrated key to the social economic and environmental dimensions Through ethics sustainability can be combined not only by referring to the problem of pollution and the exploitation of natural resources but it creates a new global era that includes all dimensions of people s lives and of society The shared and structured environmental ethics allow an approach that is no longer short term but provide the collective tools to look far in time With this book we want to lay the instrumental technical social and legislative foundations to provide a new methodology for the care of the environment as up to now there has been much discussion but little achieved in a truly ethical way **Electric**
