Information Ergonomics Michael Stein, Peter Sandl, 2012-03-30 The variety and increasing availability of hypermedia information systems, which are used in stationary applications like operators' consoles, as well as mobile systems, e.g. driver information and navigation systems in automobiles, form a foundation for the mediatization of society. From the human engineering point of view, this development and the ensuing increased importance of information systems for economic and private needs require careful deliberation of the derivation and application of ergonomics methods, particularly in the field of information systems. This book consists of two closely intertwined parts. The first theoretical part defines the concept of an information system, followed by an explanation of action regulation, as well as

cognitive theories to describe man information system interaction A comprehensive description of information ergonomics concludes the theoretical approach In the second practically oriented part of this book authors from industry as well as from academic institutes illustrate the variety of current information systems taken from different fields of transportation i e aviation automotive and railroad The reader thus gains an overview of various applications and their context of use as well as similarities and differences in design This does not only include a description of the different information systems but also places them in the context of the theories and models which were presented in the first part of this book

Networked Control Systems for Connected and Automated Vehicles Alexander Guda, 2022-11-15 Control of large scale distributed energy systems over communication networks is an important topic with many application domains The book presents novel concepts of distributed control for networked and cyber physical systems CPS such as smart industrial production lines smart energy grids and autonomous vehicular systems It focuses on new solutions in managing data and connectivity to support connected and automated vehicles CAV The book compiles original research papers presented at the conference Networked Control Systems for Connected and Automated Vehicles Russia The latest connected and automated vehicle technologies for next generation autonomous vehicles are presented The book sets new goals for the standardization of the scientific results obtained and the advancement to the level of full autonomy and full self driving FSD The book presents the latest research in artificial intelligence assessing virtual environments deep learning systems and sensor fusion for automated vehicles Particular attention is paid to new safety standards safety and security systems and control of epidemic spreading over networks The issues of building modern transport infrastructure facilities are also discussed in the articles presented in this book The book is of considerable interest to scientists researchers and graduate students in the field of transport systems as well as for managers and employees of companies using or producing equipment for these systems

Operational Safety for Aviation Managers John Frearson, 2024-11-28 Despite the vast amount of work building the foundations of safe operations aviation accidents still happen and prior to many accidents and other safety related events there was unexpressed or ignored disquiet as the last minute approached the last minute being that time when there is no longer time for discussion or analysis only safety first action This book aims at the assurance of better outcomes from these time critical situations whose genesis lies in the time period immediately preceding the last minute This assurance of better outcomes can best be assured by enabling operational managers to adopt new paradigms in the development of SOPs building the right culture and implementation of training programs relevant to good decision making required as the last minute approaches This book examines the development of the foundations for aviation safety the things that give foundational support for safety to pilots in particular but over which line pilots may have little knowledge or day to day control It provides a history of time critical safety related events providing the foundation for the understanding of the reasons why pilot inactivity indifference fixation and incapacitation can so pervade the lead up to the last minute as to leave the safe continuation of the flight resting on prompt remedial action The role of doubt how it is expressed and how it is heard
