Learning at the Crossroads of Theory and Practice Piet Van den Bossche,Wim H. Gijsselaers,Richard G. Milder,2012-03-21 Core concepts in education are changing For example professional performance or expertise is not uniquely the fruit of specialist knowledge acquired at professional schools but the sum of influences exerted by a complex web of continuous learning opportunities for which an individual is well or ill prepared by their schools and their workplace The key contributory factors to professional expertise are how professional schools connect to professional practice how schools prepare graduates for continuous learning and how the workplace endorses continuous development Thus the question this volume addresses how to design learning and working environments that facilitate the integration of these three elements is at the heart of contemporary pedagogical theory The authors also ask a second vital question how do we educate learners that go on to maximize their life s learning opportunities by regulating their own ongoing learning Learning at the Crossroads of Theory and Practice argues that with the theory of learning at a crossroads this is an unprecedented opportunity for learning about learning The book sheds light on different elements of this challenge integrating theory and practice in business education generating and fully exploiting workplace learning opportunities and enriching our classrooms by coupling theoretical knowledge with the richness of real life experience

Schneider,2018-10-10 This handbook unifies access and opportunity two key concepts of sociology of education throughout its 25 chapters It explores today s populations rarely noticed such as undocumented students first generation college students and LGBTQs and emphasizing the intersectionality of gender race ethnicity and social class Sociologists often center their work on the sources and consequences of inequality This handbook while reviewing many of these explanations takes a different approach concentrating instead on what needs to be accomplished to reduce inequality A special section is devoted to new methodological work for studying social systems including network analyses and school and teacher effects Additionally the book explores the changing landscape of higher education institutions their respective populations and how labor market opportunities are enhanced or impeded by differing postsecondary education pathways Written by leading sociologists and rising stars in the field each of the chapters is embedded in theory but contemporary and futuristic in its implications This Handbook serves as a blueprint for identifying new work for sociologists of education and other scholars and policymakers trying to understand many of the problems of inequality in education and what is needed to address them
