12. The results of a poll of 200 students are shown in the table below:

	Preferred Music Style		
	Rockers	Pop	Country
Female	14	25	27
Male	24	40	28

For this group of students, do these data suggest that gender and preferred music style are independent of each other? Justify your answer.

$$P(F \text{ and } T) = .27 \neq P(F) \cdot P(T) = .24$$

$$P(F|T) = .6 \neq P(F) = .53$$

$$\frac{27}{200} \neq \frac{14}{200} \cdot \frac{81}{200}$$

$$\frac{54}{90} \neq \frac{140}{200}$$

What is the probability that a person selected at random from this survey does not claim the internet as a source of getting the news? Show how you arrived at your answer.

theory of generalized harmonic analysis and its applications It is well known that convolutions differential operators and diffusion processes are interconnected the ordinary convolution commutes with the Laplacian and the law of Brownian motion has a convolution semigroup property with respect to the ordinary convolution Seeking to generalize this useful connection and also motivated by its probabilistic applications the book focuses on the following question given a diffusion process  $X_t$  on a metric space  $E$  can we construct a convolution like operator on the space of probability measures on  $E$  with respect to which the law of  $X_t$  has the convolution semigroup property A detailed analysis highlights the connection between the construction of convolution like structures and disciplines such as stochastic processes ordinary and partial differential equations spectral theory special functions and integral transforms The book will be valuable for graduate students and researchers interested in the intersections between harmonic analysis probability theory and differential equations
