## **Algebraic Complexity Theory Grundlehren Der Mathematischen Wissenschaften:**

*Algebraic Complexity Theory* Peter Bürgisser, Michael Clausen, Mohammad A. Shokrollahi, 2013-03-14 The algorithmic solution of problems has always been one of the major concerns of mathematics. For a long time such solutions were based on an intuitive notion of algorithm. It is only in this century that metamathematical problems have led to the intensive search for a precise and sufficiently general formalization of the notions of computability and algorithm. In the 1930s a number of quite different concepts for this purpose were proposed such as Turing machines, WHILE programs, recursive functions, Markov algorithms, and Thue systems. All these concepts turned out to be equivalent, a fact summarized in Church's thesis, which says that the resulting definitions form an adequate formalization of the intuitive notion of computability. This had and continues to have an enormous effect. First of all, with these notions it has been possible to prove that various problems are algorithmically unsolvable. Amongst these undecidable problems are the halting problem, the word problem, theory, the Post correspondence problem, and Hilbert's tenth problem. Secondly, concepts like Turing machines and WHILE programs had a strong influence on the development of the first computers and programming languages. In the era of digital computers the question of finding efficient solutions to algorithmically solvable problems has become increasingly important. In addition, the fact that some problems can be solved very efficiently while others seem to defy all attempts to find an efficient solution has called for a deeper understanding of the intrinsic computational difficulty of problems. **Computer Science - Theory and Applications**

Edward A. Hirsch, 2008-05-08 This book constitutes the refereed proceedings of the Third International Computer Science Symposium in Russia (CSR 2008) held in Moscow, Russia, June 7-12, 2008. The 33 revised papers presented together with 5 invited papers and one opening lecture were carefully reviewed and selected from 103 submissions. All major areas in computer science are addressed. The theory track deals with algorithms, protocols, and data structures, complexity, and cryptography, formal languages, automata, and their applications to computer science, computational models, and concepts, proof theory, and applications of logic to computer science. The application part comprises programming and languages, computer architecture and hardware design, symbolic computing, and numerical applications, application software, artificial intelligence, and robotics. *Open Problems in Algebraic Combinatorics* Christine Berkesch, Benjamin Brubaker, Gregg Musiker, Pavlo Pylyavskyy, Victor Reiner, 2024-08-21

In their preface the editors describe algebraic combinatorics as the area of combinatorics concerned with exact as opposed to approximate results and which puts emphasis on interaction with other areas of mathematics such as algebra, topology, geometry, and physics. It is a vibrant area which saw several major developments in recent years. The goal of the 2022 conference Open Problems in Algebraic Combinatorics 2022 was to provide a forum for exchanging promising new directions and ideas. The current volume includes contributions coming from the talks at the conference as well as a few other contributions written specifically for this volume. The articles cover the majority of topics in algebraic combinatorics with the aim of presenting recent important research results and also important

open problems and conjectures encountered in this research The editors hope that this book will facilitate the exchange of ideas in algebraic combinatorics Mathematical Foundations of Computer Science 2001 Ales Pultr,2001-08-15 This book constitutes the refereed proceedings of the 26th International Symposium on Mathematical Foundations of Computer Science MFCS 2001 held in Mariánské Lázně Czech Republic in August 2001 The 51 revised full papers presented together with 10 invited contributions were carefully reviewed and selected from a total of 118 submissions All current aspects of theoretical computer science are addressed ranging from mathematical logic and programming theory to algorithms discrete mathematics and complexity theory Besides classical issues modern topics like quantum computing are discussed as well
