Nondestructive Assay of Nuclear Materials for Safeguards and Security William H. Geist, Peter A. Santi, Martyn T. Swinhoe, 2024-10-22. This open access book describes the nondestructive assay techniques that are used for the measurement of nuclear material, primarily uranium and plutonium, for nuclear material accountancy purposes. It is a substantial revision to the so-called PANDA manual that has been a standard reference since its publication in 1991. The book covers the origin and interactions of gamma rays and neutrons as they affect nuclear measurements and also describes the theory and practice of calorimetry. The book gives a description of many instruments based on these techniques that are applied in the field. Although the basic physics has not changed since PANDA was first published, the last thirty years have seen many advances in analysis methods, instrumentation and applications. The basic descriptions of the origin and interactions of radiation have been updated and include newer references. There have been extensive revisions of the description of gamma detection methods, attenuation correction procedures and analysis methods including for the measurement of uranium enrichment and

the determination of plutonium isotopic composition Extensive revisions and additions have also been made to the description of neutron detectors and to the explanation of neutron coincidence techniques The chapter on neutron multiplicity techniques is a new addition to this edition The applications of gamma and neutron techniques have been completely overhauled to remove obsolete systems and to include many current applications The values of and references to nuclear data have been updated This updated edition is an essential reference for academic researchers and practitioners in the field This is an open access book **Orthopaedic Examination, Evaluation, and Intervention** Mark
