

2.3. DISTRIBUTION TRANSFORMERS

2.3.1. Large distribution transformers, LDT IEC Standard

Power range	5000 kVA and above
Primary voltage	Up to 72,5 kV
Available fluids	Mineral oil, dimethyl silicone, esters and synthetic hydrocarbons

Transformers of this type are used for receiving the energy from higher voltage levels and to transform and distribute the energy to lower voltage level substation or directly to large industrial consumers.

Transformers in this range are three phase and can be manufactured with off-circuit tap changer or on-load tap changer. Transformers provided with on-load tap changer usually have a separate tap winding.

The core is constructed of grain oriented steel laminations. The windings are made of paper insulated rectangular wire in the form of multi-layer disc or helical windings, and the conductor materials are either copper or aluminium. The tanks typically have radiators, however the smaller sizes might have corrugated tank walls.

ANSI / IEEE Standard

Substation and Unit Substation

Power range	112,5 kVA - 20 MVA
Primary voltage	Up to 69 kV
Secondary voltage	Up to 34,5 kV
Available fluids	Mineral oil, dimethyl silicone, esters and synthetic hydrocarbons

The Substation and Unit Substation Transformer are three phase and can be manufactured with off-circuit tap changer or on-load tap changer. The core is made of grain oriented silicon steel laminations. The coil is made of either aluminium or copper both in high and low voltage windings. The tank is equipped with radiators.

Abb Transformer Maintenance Manual:

Moody's International Manual, 1998 **Advanced Transformer Demonstration and Validation Project Summary Report Based on Experiences at Nas, North Island, San Diego, CA** Scott McBride, 1992 **International Conference Power Transformers, 6-7 April 2000, New Delhi, India**, 2000 **Offshore Electrical Engineering Manual** Geoff MacAngus-Gerrard, 2017-11-06

Offshore Electrical Engineering Manual Second Edition is for electrical engineers working on offshore projects who require detailed knowledge of an array of equipment and power distribution systems. The book begins with coverage of different types of insulation, hot spot temperatures, temperature rise, ambient air temperatures, basis of machine ratings, method of measurement of temperature rise by resistance measurement of ambient air temperature. This is followed by coverage of AC generators, automatic voltage regulators, AC switchgear, transformers, and programmable electronic systems. The emphasis throughout is on practical, ready-to-apply techniques that yield immediate and cost-effective benefits. The majority of the systems covered in the book operate at a nominal voltage of 24 V dc, and although it is not necessary for each of the systems to have separate battery and battery charger systems, the grouping criteria require more detailed discussion. The book also provides information on equipment such as dual chargers and batteries for certain vital systems, switchgear tripping, closing, and engine start batteries which are dedicated to the equipment they supply. In the case of engines which drive fire pumps, duplicate chargers and batteries are also required. Packed with charts, tables, and diagrams, this work is intended to be of interest to both technical readers and to general readers. It covers electrical engineering in offshore situations with much of the information gained in the North Sea. Some topics covered are offshore power requirements, generator selection, process drivers, and starting requirements, control and monitoring systems, and cabling and equipment installation. Discusses how to perform inspections of electrical and instrument systems on equipment using appropriate regulations and specifications. Explains how to ensure electrical systems components are maintained and production is uninterrupted. Demonstrates how to repair, modify, and install electrical instruments ensuring compliance with current regulations and specifications. Covers specification management and technical evaluation of offshore electrical system design. Features evaluation and optimization of electrical system options including DC/AC selection and offshore cabling designs.
