Atlas Of Chrysophycean Cysts Volume Ii Developments In Hydrobiology:

Atlas of Chrysophycean Cysts A.N. Wilkinson, Barbara A. Zeeb, John P. Smol, 2013-06-29 This Atlas attempts to dispel some of the mystery surrounding stomatocysts to facilitate the accurate identification of individual cyst morphotypes and to encourage other workers to begin using these important indicators of environmental change The terminology is outlined in detail This is followed by detailed descriptions of cyst morphotypes which continues from work completed in the first Atlas Any available biogeographical and ecological information is also provided We believe this Atlas will be useful to paleoecologists who wish to include stomatocysts in their studies We also expect this book will be used by researchers working with living chrysophytes and those interested in the morphology and ultrastructure of cyst morphotypes Hopefully these descriptions will further accelerate the continued effort to link cyst morphotypes to the algae that produce them

Atlas of Chrysophycean Cysts K. Duff, Barbara A. Zeeb, John P. Smol, 2013-04-17 Chrysophycean algae are a diverse and often abundant group of primarily freshwater phytoplankton characterized by the endogenous formation of siliceous cysts or stomatocysts also called statospores or statocysts Cyst morphology is highly variable but believed to be species specific Recently cysts have received considerable attention from phycologists and especially paleoecologists who wish to use these indicators for assessments of environmental change Nonetheless attempts at using cysts have often been hampered by taxonomic problems This Atlas dispels some of the mystery surrounding stomatocysts facilitating the accurate identification of individual cyst morphotypes and encouraging other workers to begin using these important indicators The terminology used to describe cysts is outlined in detail followed by detailed descriptions of cyst morphotypes following International Statospore Working Group ISWG guidelines complemented by scanning electron and light micrographs as well as line illustrations Any available biogeographical and ecological information is also provided These descriptions will further accelerate the continued effort to link cyst morphotypes to the algae that produce them For paleoecologists who wish to include stomatocysts in their studies researchers working with living chrysophycean algae and those interested in the morphology and ultrastructure of cyst morphotypes *Annales de Limnologie*, 2004 **Freshwater Algae of North**
