Magnetically Activated and Guided Isotope Separation Thomas R. Mazur, 2015-11-19 This thesis describes a proof of principle experiment demonstrating a technique for stable isotope enrichment called Magnetically Activated and Guided Isotope Separation MAGIS Over the past century many enriched isotopes have become available thanks largely to electromagnetic separators called calutrons Due to substantial maintenance and operating costs the United States decommissioned the last of its calutrons in 1998 leading to demand for alternative methods of isotope separation The work presented here suggests the promise for MAGIS as a viable alternative to the calutrons The MAGIS technique combines optical pumping with a scalable magnetic field gradient to enrich atoms of a specific isotope in an atomic beam Benchmarking this work against the calutron using lithium as a test case the author demonstrated comparable enrichment in a manner that should scale to the production of similar quantities while requiring vastly less energy input

Microwave Cavities and Detectors for Axion Research Gianpaolo Carosi,Gray Rybka,2020-07-20 The nature of dark matter remains one of the preeminent mysteries in physics and cosmology It appears to require the existence of new particles whose interactions with ordinary matter are extraordinarily feeble One well motivated candidate is the axion an extraordinarily light neutral particle that may possibly be detected by looking for their conversion to detectable microwaves in the presence of a strong magnetic field This has led to a number of experimental searches that are beginning to probe plausible axion model space and may reveal the axion in the near future These proceedings discuss the challenges of designing and operating tunable resonant cavities and detectors at ultralow temperatures The topics discussed here have potential application far beyond the field of dark matter detection and may be applied to resonant cavities for accelerators as well as designing superconducting detectors for quantum information and computing applications This work is intended for graduate students and researchers interested in learning the unique requirements for designing and operating microwave cavities and detectors for direct axion searches and to introduce several proposed experimental concepts that are still in the prototype stage
