### Question 1

Mrs. Kathy Dye, 45 years old, has end-stage renal disease secondary to glomerulonephritis. She began dialysis emergently and has a cuffed, tunneled, central venous catheter.

---

The preferred site for a central venous catheter for dialysis access is the -

- right external jugular.
- right internal jugular.
- left external jugular.
- left internal jugular.

Correct Answer:

right internal jugular.

The preferred site is the right internal jugular vein because this site offers a more direct route to the right atrium than the left-sided great veins. Catheter insertion and maintenance in the right internal jugular vein are associated with a lower risk for complications compared to other potential catheter insertion sites.

Nurses and Dialysis Personnel 8th Edition provides a practical introduction to dialysis and an excellent review for the certification exam. It assumes no prior knowledge of patient care nursing procedures or dialysis principles, using a question and answer format to discuss the basic principles, basic diseases, and basic problems found in the treatment of kidney patients by dialysis. Dialysis expert Judy Kallenbach writes in a clear, easy-to-read style, explaining topics such as the chemistry of body fluid and electrolytes, renal failure, nutrition, infection control, and the important psychosocial aspects of dialysis treatment. Easy-to-understand language introduces new terms and concepts, not assuming prior knowledge of dialysis. A question and answer format makes information easy to find and easy to read. Comprehensive coverage provides the knowledge needed to care for dialysis patients and to prepare for the certification exam, with topics including a review of fluid and electrolytes, transplantation, infection control, and the important psychosocial aspects of dialysis treatment. More than 60 illustrations depict all aspects of dialysis treatment and care. A multidisciplinary approach includes a chapter on the different roles in the hemodialysis team, describing how dialysis care is coordinated and what patients go through during their treatment. Coverage of the entire lifespan helps in caring for patients of different ages, including separate chapters on pediatric hemodialysis and end-stage renal disease in the elderly. A discussion of home dialysis therapies prepares you for a time when cost cutting may lead to a wider use of home dialysis treatment. Useful appendices offer quick reference to organizations and resources, pound to kilogram conversions, a glossary, and more. New Math Calculations chapter helps in accurately programming goals for dialysis patients. New Test Taking Guidelines chapter offers tips and strategies to prepare you for the certification exam. Updated coverage includes the latest on water treatment, infection control, patient assessment, and the plan of care, with additional information on the management of quality and professional boundaries. Coverage of revised regulations from the Centers for Medicare and Medicaid Services (CMS) updates the requirements for reimbursement for services provided to federally insured patients, with changes in areas such as patient safety, infection control, water, and dialysate quality, facility design, patient care, patient plan of care, performance improvement, and personnel qualifications.
