Arithmetic Counts! Paul Shoecraft,2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math

America's children are being held back in math because of how arithmetic is drug out in elementary school. Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade. The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized. Research shows that the human brain is not designed to remember things learned by rote when no longer practiced. That's acknowledged in the use of the aphorism that states the obvious that we remember what we use and forget what we don't. You know that to be true if you've ever forgotten things you once knew as well as your own name, things like an old address or a license plate number. Every child can understand base ten numeration when taught hands on with arithmetic blocks. Thereby every child can understand base ten arithmetic. And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong. What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget. **Go Math!**, 2015 **What**

Lies Ahead for America's Children and Their Schools Richard Sousa, 2014-03-01. The coming decade holds immense potential for dramatic improvement in U.S. education and in the achievement of American children and in this volume members of the Hoover Institution's Koret Task Force on K-12 Education examine both the potential gains and the pitfalls that lie ahead informed by where U.S. education has been, what changes have been made in recent years and what's still required for the comprehensive overhaul that this vital enterprise so urgently needs. Looking backward is infinitely easier than predicting the future but planning for the future is necessary if anything is to change and by analyzing the recent past and present condition of American primary and secondary school education across a host of key topics task force members in this volume chart a bold course for the years ahead. Optimistic about the opportunities at hand they identify essential and feasible reforms as well as the barriers that must be overcome if those changes are to occur. They offer high quality scholarship and thoughtful prescriptions for productive policy alternatives. **Literacy Centers Level 3** Kelly

Understanding Instructionally Useful Assessment Carla Evans, Scott Marion, 2024-06-19 Understanding Instructionally Useful Assessment offers new insights into how various types of assessments from the state to the classroom will differ in their usefulness for supporting instructional decision making and student learning In order to most effectively serve students it is essential that educators avoid conflating the assessment information that teachers use for instructional purposes and the data that leaders and administrators use for evaluative or monitoring purposes This book provides classroom teachers as well as school and district leaders with a clear conception of what makes assessments their purpose design reporting and resulting information useful or not for informing instruction and how they can select assessment tools suited to specific purposes Each chapter addresses the knowledge and skills that K 12 staff need in order to challenge claims made by policymakers test vendors or even other educators that any assessment can be used to inform instruction Educators will come away better prepared to remove unnecessary or redundant assessments from their systems and to create structures policies and processes that best support the instructional usefulness of assessments for student learning
