### Learning Goals

- Describe the relationships between volume and amount of solute to solution concentration.
- Predict how solution concentration will change for any action (or combination of actions) that adds or removes water, solute, or solution, and explain why.

**Develop your understanding:** Explore the Concentration simulation. Try to find all the ways you can change the concentration of the solution in the beaker.

### Explain your understanding:

1. Mole calculation review. Show your work:
  - a. How many moles is  
55 g of NaCl? = 0.94 mol NaCl  
0.025 g of NaCO<sub>3</sub>? = 0.0004 g of NaCO<sub>3</sub>
  - b. How many grams is  
0.5 moles of NaCl? = 29.2 g  
2.11 moles of NaCO<sub>3</sub>? = 123.3 g
2. There are several ways to measure Concentration. This simulation uses Molarity (mol/L).
  - a. What does mol/L mean? mol/L means Molar Concentration.
  - b. Describe in your own words how mol/L compares to grams/liter. (similarities and differences)

**Similarities:**

mol/L and grams/liter both are units of concentration.

**Differences:**

mol/L concentration says how many moles of solute are present in 1L of solution.

grams/liter concentration says how many grams of solute are present in 1L of solution.

3. Describe at least 2 ways in the simulation to change each of the parameters:

Fundamental Laboratory Approaches for Biochemistry and Biotechnology Alexander J. Ninfa, David P. Ballou, Marilee Benore, 2009-05-26 Ninfa Ballou Benore is a solid biochemistry lab manual dedicated to developing research skills allowing students to learn techniques and develop the critical thinking and organizational approaches necessary to conduct laboratory research Ninfa Ballou Benore focuses on basic biochemistry laboratory techniques but also includes molecular biology exercises a reflection of most courses which concentrate on traditional biochemistry experiments and techniques The experiments are designed so that theory and technique are learned as fundamental research tools and the biochemistry and molecular biology applications are seamlessly integrated throughout the manual The manual also includes an introduction to ethics in the laboratory uncommon in similar manuals Most importantly perhaps is the authors three pronged approach to encouraging students to think like a research scientist first the authors introduce the scientific method and the hypothesis as a framework for developing conclusive experiments second the manual's experiments are designed to become increasingly complex in order to teach more advanced techniques and analysis finally gradually the students are required to devise their own protocols In this way students and instructors are able to break away from a cookbook approach and to think and investigate for themselves Suitable for lower level and upper level courses Ninfa spans these courses and can also be used for some first year graduate work
