Concepts and Challenges in Retinal Biology H. Kolb, H. Ripps, Samuel Miao-sin Wu, S. Wu, 2003-09-11 In August 2000 a Festschrift was held at the Marine Biological Laboratory Woods Hole Massachusetts to celebrate the career of Professor John E Dowling on the occasion of his 65th birthday Containing contributions from more than 50 of John s colleagues representing a Who s Who of the vision research community this work not only provides a memento of the occasion but will hopefully serve as a basic reference for future researchers in retinal biology The volume is divided somewhat arbitrarily into seven areas of retinal research containing chapters that present in some cases a broad overview of a particular topic and in others an account of current research and studies in progress These chapters exemplify the richness diversity and excitement of contemporary retinal research They also remind us of how much more needs to be done before we understand fully the interrelationship between retinal neurons the complex interactions between neurons and glial cells and the mechanisms that govern retinal development A final chapter contributed by John Dowling provides an overview of past accomplishments and offers some future perspectives on retinal research in the 21st century

Psychiatry, Psychoanalysis, and the New Biology of Mind Eric R. Kandel, 2008-05-20 Brought together for the first time in a single volume these eight important and fascinating essays by Nobel Prize winning psychiatrist Eric Kandel provide a breakthrough perspective on how biology has influenced modern psychiatric thought Complete with commentaries by experts in the field Psychiatry Psychoanalysis and the New Biology of Mind reflects the author s evolving view of how biology has revolutionized psychiatry and psychology and how potentially could alter modern psychoanalytic thought The author s unique perspective on both psychoanalysis and biological research has led to breakthroughs in our thinking about neurobiology psychiatry and psychoanalysis all driven by the central idea that a fuller understanding of the biological processes of learning and memory can illuminate our understanding of behavior and its disorders These wonderful essays cover the mechanisms of psychotherapy and medications showing that both work at the same level of neural circuits and synapses and the implications of neurobiological research for psychotherapy the ability to detect functional changes in the brain after psychotherapy which enables us for the first time to objectively evaluate the effects of psychotherapy on individual patients the need for animal models of mental disorders for example learned fear to show how molecules and cellular mechanisms for learning and memory can be combined in various ways to produce a range of adaptive and maladaptive behaviors the unification of

behavioral psychology cognitive psychology neuroscience and molecular biology into the new science of the mind charted in two seminal reports on neurobiology and molecular biology given in 1983 and 2000 the critical role of synapses and synaptic strength in both short and long term learning the biological and social implications of the mapping of the human genome for medicine in general and for psychiatry and mental health in particular The author concludes by calling for a revolution in psychiatry one that can use the power of biology and cognitive psychology to treat the many mentally ill persons who do not benefit from drug therapy Fascinating reading for psychiatrists psychoanalysts social workers residents in psychiatry and trainees in psychoanalysis Psychiatry Psychoanalysis and the New Biology of Mind records with elegant precision the monumental changes taking place in psychiatric thinking It is an invaluable reference work and a treasured resource for thinking about the future

Systems Biology in Psychiatric Research Felix Tretter, Georg Winterer, Peter J. Gebicke-Haerter, Eduardo R. Mendoza, 2010-03-30 This first book to provide a comprehensive overview of the recent progress made in this break through approach includes expert contributions from a variety of disciplines Particular focus is placed on high throughput methods and the analysis of data thus obtained as well as their use in silico experiments so as to gain an insight into the complex biological processes in neuronal systems A must have for everyone working in psychiatric research

Genome Mapping and Genomics in Laboratory Animals Paul Denny, Chittaranjan Kole, 2013-01-13 Mapping of animal genomes has generated huge databases and several new concepts and strategies which are useful to elucidate origin evolution and phylogeny Genetic and physical maps of genomes further provide precise details on chromosomal location function expression and regulation of academically and economically important genes The series Genome Mapping and Genomics in Animals provides comprehensive and up to date reviews on genomic research on a large variety of selected animal systems contributed by leading scientists from around the world Laboratory animals are those species that by accident of evolution domestication and selective breeding are amenable to maintenance and study in a laboratory environment Many of these species are studied as models for the biology and pathology of humans Laboratory animals included in this volume are sea urchin nematode worm fruit fly sea squirts puffer fishes medaka fish African clawed frog mouse and rat

The Psychological Construction of Emotion Lisa Feldman Barrett, James A. Russell, 2014-10-29 This volume presents cutting edge theory and research on emotions as constructed events rather than fixed essential entities It provides a thorough introduction to the assumptions hypotheses and scientific methods that embody psychological constructionist approaches Leading scholars examine the neurobiological cognitive perceptual and social processes that give rise to the experiences Western cultures call sadness anger fear and so on The book explores such compelling questions as how the brain creates emotional experiences whether the ingredients of emotions also give rise to other mental states and how to define what is or is not an emotion Introductory and concluding chapters by the editors identify key themes and

controversies and compare psychological construction to other theories of emotion

Time And Science - Volume 2: Life Sciences Remy Lestienne, Paul Harris, 2023-06-22

Life and Time are very closely linked because life needs the patience of eons to emerge and evolve and also due to the precision timing of neural networks in the perception of the world encoding information and performing actions A dozen renowned biologists and neuroscientists collaborate in this volume to explore the various facets of timing in the living world The temporal programming of the activity of the genetic code controls the essential mechanisms of individual development from zygote to adult while evolution uses the succession of generations to accomplish its work For its part the brain accomplishes the miracle of justifying presentism and reconstructing the continuity of present time from the fragmented data accessible to the senses as well as measuring durations and dating events To this end the brain uses a multilevel temporal coding to transport and decode sensory information and prepare motor responses It is only gradually that we have discovered the temporal precision of the mechanisms involved of the order of a few milliseconds or less for the adjustment of neural networks or the synaptic plasticity used for memory formation Today the perfection of natural neural networks the energy saving use of spikes of electrical impulses to categorize the sensory environment and to guess its probable future is an example to the modelers and engineers of artificial intelligence
