Membrane Protein Structure Stephen H White, 2013-05-27

Studies of receptors ion channels and other membrane proteins require a solid understanding of the structural principles of these important biomolecules Membrane protein structure is however a very challenging field The structures of only three types of transmembrane proteins have been determined to moderate or high resolution during the last two decades a period during which the amino acid sequences of hundreds if not thousands of membrane proteins have been reported As a result the creation of structural models to serve as guides for studies of receptors channels and other membrane proteins has become crucially important This book has been assembled in order to share the experiences and findings of expert researchers in protein structure and structure prediction methods as well as membrane biophysics and lipid physical chemistry whose work establishes the basis for the development of suitable model structures The reviews presented here emphasize fundamental ideas and provide an entry to the diverse and complex literature The four major sections deal with the general nature of the membrane protein structure problem biochemical and molecular biological approaches to protein topology direct structural methods and model and physicochemical approaches The work will be of interest to physiologists cellular and molecular biologists biophysicists and biochemists working on the function of membrane proteins such as receptors ion channels and transporters as well as senior graduate students and independent investigators

Conceptual Structures: From Information to Intelligence Madalina Croitoru, Sébastien Ferré, Dickson Lukose, 2010-07-30

The 18 International Conference on Conceptual Structures ICCS 2010 was the latest in a series of annual conferences that have been held in Europe Australia and North America since 1993 The focus of the conference has been the representation and analysis of conceptual knowledge for research and practical application ICCS brings together researchers and practitioners in information and computer sciences as well as social science to explore novel ways that conceptual structures can be deployed Arising from the research on knowledge

representation and reasoning with conceptual graphs over the years ICCS has broadened its scope to include variations from a wider range of theories and related practices among them other forms of graph based reasoning systems like RDF or existential graphs formal concept analysis Semantic Web technologies ontologies concept mapping and more Accordingly ICCS represents a family of approaches related to conceptual structures that build on the successes with techniques derived from artificial intelligence knowledge representation and reasoning applied mathematics and lattice theory computational linguistics conceptual modeling and designed grammatic reasoning and logic intelligent systems and knowledge management The ICCS 2010 theme From Information to Intelligence hints at unveiling the reasoning capabilities of conceptual structures Indeed improvements in storage capacity and performance of computing infrastructure have also affected the nature of knowledge representation and reasoning KRR systems shifting their focus toward representational power and execution performance Therefore KRR research is now faced with a challenge of developing knowledge representation and reasoning structures optimized for such reasonings
