Conceptual Revolutions Paul Thagard, 2018-06-05 In this path breaking work Paul Thagard draws on the history and philosophy of science cognitive psychology and the field of artificial intelligence to develop a theory of conceptual change capable of accounting for all major scientific revolutions The history of science contains dramatic episodes of revolutionary change in which whole systems of concepts have been replaced by new systems Thagard provides a new and comprehensive perspective on the transformation of scientific conceptual systems Thagard examines the Copernican and the Darwinian revolutions and the emergence of Newton's mechanics Lavoisier's oxygen theory Einstein's theory of relativity quantum theory and the geological theory of plate tectonics He discusses the psychological mechanisms by which new concepts and links between them are formed and advances a computational theory of explanatory coherence to show how new theories can be judged to be superior to previous ones

Research on Physics Education Edward F. Redish, Matilde Vicentini, Società italiana di fisica, 2004 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the

competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment

Science Education Research and Practice in Europe Doris Jorde, Justin Dillon, 2012-12-17 Each volume in the 7 volume series *The World of Science Education* reviews research in a key region of the world These regions include North America South and Latin America Asia Australia and New Zealand Europe Arab States and Sub Saharan Africa The focus of this Handbook is on science education in Europe In producing this volume the editors have invited a range of authors to describe their research in the context of developments in the continent and further afield In reading this book you are invited to consider the historical social and political contexts that have driven developments in science education research over the years A unique feature of science education in Europe is the impact of the European Union on research and development over many years A growing number of multi national projects have contributed to the establishment of a community of researchers increasingly accepting of methodological diversity That is not to say that Europe is moving towards homogeneity as this volume clearly shows

Progressing Science Education Keith S. Taber, 2009-05-29 Exploring one of the central themes in science education theory this volume examines how science education can be considered as a scientific activity within a broad post positivist notion of science Many students find learning science extremely problematic whatever level of education they have reached At the end of the 1970s a new approach to tackling learning difficulties in science was developed drawing on ideas from psychology and cognitive science and centred on the way students build up new knowledge in reference to their existing ideas Constructivism became the dominant paradigm in science education research for two decades spawning a vast body of literature reporting aspects of learners ideas in different science topics However Constructivism came under fire as it was recognised that the research did not offer immediate and simple prescriptions for effective science teaching The whole approach was widely criticised in particular by those who saw it as having anti science leanings In this book the notion of scientific research programmes is used to understand the development limitations and potential of constructivism It is shown that constructivist work in science education fits into a coherent programme exploring the contingencies of learning science The author goes further to address criticisms of constructivism evaluate progress in the field and suggest directions for future research It is concluded that constructivism has provided the foundations for a progressive research programme that continues to guide enquiry into learning and teaching science

Indigenous Knowledge Systems integration into STEM education: A Zimbabwean perspective Sunzuma G, Zezekwa N, Mudzamiri

E,Chikuvadze P,2025-05-25 The inclusion of Indigenous Knowledge Systems IKS in STEM education is a crucial step towards decolonizing knowledge and creating inclusive relevant learning spaces that reflect culture This book examines the theoretical practical and contextual aspects of incorporating IKS into Zimbabwe s STEM curriculum with a focus on high school education The book is a reflection of the realization that education systems in postcolonial societies like Zimbabwe must do more than simply propagate traditional Western paradigms The lived experiences past events and educational institutions of their society must be reflected on and informed by them The rich Indigenous knowledge in Zimbabwe has played a significant role in shaping communities understanding of agriculture health engineering mathematics and the environment over time Still much of this knowledge has been marginalized in formal education By providing a framework for the meaningful integration of IKS into STEM disciplines this work seeks to close that gap Indigenous Knowledge Systems are introduced in Chapter 1 detailing their origin development and philosophical basis Chapter 2 An Examination of the current integration of IKS into STEM education in Zimbabwe taking into account curricular approaches and classroom practice Chapter 3 highlights the importance of evaluating and assessing integration efforts by proposing culturally sensitive and multidimensional approaches that are appropriate for Zimbabwean classrooms In Chapter 4 we explore the challenges and obstacles to achieving successful IKS STEM integration such as teacher readiness epistemological tensions and systemic resistance Chapter 5 offers an exceptional examination of how Indigenous knowledge artefacts and practices can be utilized for conceptual development in high school STEM instruction with practical examples from Zimbabwean communities being included in the analysis It is aimed at teachers researchers and practitioners of decolonial education practices as well as policymakers and teacher trainers to develop locally relevant and globally relevant pedagogies We aspire that this work will contribute to advancing scholarship that recognizes Indigenous knowledge as essential living science and promotes African learners as both recipients and producers of valuable knowledge
