Conversations on Electric and Magnetic Fields in the Cosmos Eugene N. Parker, 2013-03-25 Today's standard textbooks treat the theoretical structure of electric and magnetic fields but their emphasis is on electromagnetic radiation and static electric and magnetic fields. In this book Eugene Parker provides advanced graduate students and researchers with a much needed complement to existing texts: one that discusses the dynamic electromagnetism of the cosmos that is the vast magnetic fields that are carried bodily in the swirling ionized gases of stars and galaxies and throughout intergalactic space. Parker is arguably the world's leading authority on solar wind and the effects of magnetic fields in the heliosphere and his originality of thought and distinctive approach to physics are very much in evidence here. Seeking to enrich discussions in standard texts and correct misconceptions about the dynamics of these large scale fields, Parker engages readers in a series of conversations that are at times anecdotal and even entertaining without ever sacrificing theoretical rigor. The dynamics he describes represents the Maxwell stresses of the magnetic field working against the pressure and inertia of the bulk motion of ionized gases characterized in terms of the magnetic field and gas velocity. Parker shows how this dynamic interaction cannot be fully expressed in terms of the electric current and electric field. *Conversations on Electric and Magnetic Fields in the Cosmos* goes back to basics to explain why classical hydrodynamics and magnetohydrodynamics are inescapable even in the deepest reaches of space. *Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles* Robert

Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something of a level approaching large scale impact. By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation, we aim to change the conversation and focus on how we work and learn together: i.e. extending the implementation and knowledge of co design methods. In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote. First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research/practitioner partnerships. Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions. Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds. As a result these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions we will add to this collection a third type of publication: design profiles. These will present practitioner developed pedagogical designs at varying levels of

abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
