

Chapter 24: Magnetism

Magnetic Fields

- Electric charges produce electric fields
- More than one charge, and you'll get an electric force
- **Moving** charges produce magnetic fields
- More than one moving charge, and you'll get magnetic forces!
- Electricity + Magnetism = Electromagnetism (one of the four fundamental forces)

Magnetic Field

- Moving charges \rightarrow current
- Every magnetic field exists because of currents
- Every magnet is a "dipole" (has a N and S)
 - No "magnetic charges" (or "magnetic monopoles") have ever been found!
- Similar rule as electric forces: like poles repel, opposites attract

Like Poles Repel

Opposite Poles Attract

Natural Magnets and Domains

- If moving charges cause magnetic fields, where are the moving charges in a magnetic material?
- Look down at the subatomic level:
 - Electrons move around the nucleus
 - Electrons and protons also have a spin!
- Similarly-aligned atoms occur in clusters called *magnetic domains*
