1. A crate filled with delicious junk food rests on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .

- The net force on the crate is (zero) (greater than zero).
- Evidence for this is no acceleration.

2. A slight pull P is exerted on the crate, not enough to move it.

- The force of friction f acting on the crate is (less than) (equal to) (greater than) P .
- The net force on the crate is (zero) (greater than zero).

3. Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.

- Friction f is (less than) (equal to) (greater than) P .
- Constant velocity means acceleration is (zero) (greater than zero).
- The net force on the crate is (less than) (equal to) (greater than) zero.

4. Pull P is further increased and is now greater than friction f .

- The net force on the crate is (less than) (equal to) (greater than) zero.
- The net force acts toward the right, so acceleration acts toward the (left) (right).

- If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
- If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
- If the force of sliding friction is 250 N, what force is necessary to keep the crate sliding at constant velocity? 250 N
- If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 300 N? 1 m/s² 500 N? 5 m/s²

Decoherence M. Mensky, 2013-04-17 Quantum measurement is a measurement which is sufficiently precise for quantum effects to be essential. It was always one of the most important points in quantum mechanics because it most evidently revealed the difference between quantum and classical physics. Now quantum measurement is again under active investigation, first of all because of the practical necessity of dealing with highly precise and complicated measurements. The nature of quantum measurement has become understood much better during this new period of activity, the understanding being expressed by the concept of decoherence. This term means a physical process leading from a pure quantum state (wave function of the system prior to the measurement) to its state after the measurement which includes classical elements. More concretely, decoherence occurs as a result of the entanglement of the measured system with its environment and results in the loss of phase relations between components of the wave function of the measured system. Decoherence is essentially nothing else than quantum measurement but considered from the point of view of its physical mechanism and resolved in time. The present book is devoted to the two concepts of quantum measurement and decoherence and to their interrelation, especially in the context of continuous quantum measurement.

Being Interdisciplinary Alan Wilson, 2022-05-03 In *Being Interdisciplinary*, Alan Wilson draws on five decades as a leading figure in urban science to set out a systems approach to interdisciplinarity for those conducting research in this and other fields. He argues that most research is interdisciplinary at base and that a systems perspective is particularly appropriate for collaboration because it

fosters an outlook that sees beyond disciplines There is a more subtle thread too A systems approach enables researchers to identify the game changers of the past as a basis for thinking outside convention for learning how to do something new and how to be ambitious in a nutshell how to be creative Ultimately the ideas presented address how to do research Building on this systems focus the book first establishes the basics of interdisciplinarity Then by drawing on the author s experience of doing interdisciplinary research and working from his personal toolkit it offers general principles and a framework from which researchers can build their own interdisciplinary toolkit with elements ranging from explorations of game changers in research to superconcepts In the last section the book tackles questions of managing and organising research from individual to institutional scales Alan Wilson deploys his wide experience researcher in urban science university professor and vice chancellor civil servant and institute director to build the narrative While his experience in urban science provides the illustrations the principles apply across many research fields Problems and Problem Solving in Chemistry Education
