The research in Physics Education has to do with the search of solutions to the complex problem of how to improve the learning and teaching of physics The complexity of the problem lies in the different fields of knowledge that need to be considered in the research In fact besides the disciplinary knowledge in physics which must be considered from the conceptual the historical and the epistemological framework one has to take into account some basic knowledge in the context of psychology and the cognitive sciences for the general and contextual aspects of learning and some basic knowledge in education and communication for what concerns teaching skills and strategies Looking back at the historical development of the research one may recognize that the complexity of the endeavour was not clear at first but became clear

in its development which shifted the focus of the research in the course of time from physics to learning to teaching We may say that the research started more than 30 years ago with a focus on disciplinary knowledge Physicists in different parts of the western world after research work in some field of physics decided to concentrate on the didactical communication of physical knowledge

Our Concept of the Earth Lapo Boschi, 2025-01-25 With its new unique look at the physics of the earth and at how this field got to where it is today this is not a conventional textbook but could easily be used as one Designed to be understood by readers with no background in the earth sciences and only little previous knowledge of math and physics Our Concept of the Earth differs from other geophysics books in that it places geo scientific concepts in their historical context ideas are presented in chronological order according to the moment they emerged one in response to the other throughout the history of the discipline In this way the material covered in any given section of the book rests on simpler previously established concepts that are explained earlier in the book The book is extremely self contained and lends itself to being read from beginning to end an experience that will captivate and even entertain a broad range of readers in academia and beyond

Proceedings of the International Conference on Mathematics and Science Education (ICoMSE 2023) Habiddin Habiddin, Hadi Suwono, Nani Farida, 2024-07-31 This is an open access book We are happy to welcome you to the 7th International Conference on Mathematics and Science Education ICoMSE 2023 at the Department of Science Education Universitas Negeri Malang Malang East Java Indonesia August 14 15th 2023 It is a privilege to play host to the world s foremost experts in the fields of chemistry biology physics mathematics and science education at this important conference on Science and Mathematics education Our knowledge of how and why students learn science chemistry biology physics and mathematics and what can be done to improve science and mathematics education is expanded by studies of these subjects pedagogy We in the field of chemistry biology physics and mathematics education research are interested in what influences aid or hinder students ability to learn the subject We investigate various classroom settings emerging methods for incorporating technology into chemistry biology physics and mathematics education and the interplay between chemistry biology physics and mathematics society and other scientific fields We are always working to improve our methods of preparing chemistry biology physics and mathematics teachers and providing ongoing support for their professional growth as we search for factors that increase student interest in the subject We also consider the potential impact of recent developments in pedagogy and technology in the field of chemistry biology physics and mathematics education on ongoing investigations We therefore chose the theme of the conference Science and Mathematics Education Research for Sustainable Development The global situation following the ongoing post COVID 19 pandemic and the difficulties faced by chemistry biology physics and mathematics education inspired this theme In the midst of a global post pandemic this highlights the urgency of investing in quality education The 4th goal of the United Nations Sustainable Development Agenda is Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all SDG 4 The field of chemistry

Introduction to the Basic Concepts of Modern Physics Carlo Maria Becchi, Massimo D'Elia, 2010-06-04 These notes are designed as a text book for a course on the Modern Physics Theory for undergraduate students The purpose is providing a rigorous and self contained presentation of the simplest theoretical framework using elementary mathematical tools A number of examples of relevant applications and an appropriate list of exercises and answered questions are also given

Chemical Thermodynamics Victor CM Freestone, 2025-06-13 Thermodynamics can never be made easy but with the right approach and a consistent use of scientific terms it can be made less opaque and it can give a person who is prepared to try an insight into how science explains why things happen the way they do The approach adopted in this book will give readers a better understanding of how science works together with its limitations Unfortunately thermodynamics or at least some parts of it is a subject which apart from quantum mechanics probably causes most confusion and bewilderment amongst scientists The majority of students do not understand or get thermodynamics and it is considered a hard or difficult subject There are multiple reasons for this There is of course mathematics and many thermodynamic texts appear to be lists upon lists of differential equations Another reason is that thermodynamics is as often as not poorly taught by teachers lecturers who themselves do not understand or appreciate or have any interest in the subject often all three This results not only in a lack of scientific rigorousness in the teaching of the subject with the resulting confusion and sometimes teachers lecturers and authors just get it plain wrong this occurs surprisingly often However it need not be like this and although mathematics including calculus is required it can be kept to a relatively elementary level in order to obtain an understanding of this most important of subjects No one can pretend that the subject is easy but it can be made more accessible by a rigorous definition of terms and concepts and ensuring that a consistency of use of these definitions is maintained Highlighting the benefits of thermodynamics in practical science the text gives an intuitive grasp of the major concepts of thermodynamics such as energy and entropy Provides a new pedagogic approach to understanding and teaching chemical thermodynamics Starting with a set of basic simple assumptions about what constitutes topics such as an ideal gas theories are developed in a clear concise and accessible manner that will either answer or at the very least give an insight into a

surprising range of scientific phenomena including energy heat temperature properties of gases time and quantum theory Assumes that the reader has essentially no knowledge of the subject Mathematics including calculus is kept to a relatively elementary level in order to obtain an understanding of this most important of subjects Provides the reader with a better understanding of how science works together with its limitations *Higher Education Learning Methodologies and Technologies Online* Gabriella Casalino,Marta Cimitile,Pietro Ducange,Natalia Padilla Zea,Riccardo Pecori,Pietro Picerno,Paolo Raviolo,2022-03-05 This book constitutes the thoroughly refereed post conference proceedings of the Third International Workshop on Higher Education Learning Methodologies and Technologies Online HELMeTO 2021 held in Pisa Italy in September 2021 Due to the COVID 19 pandemic the conference was held online The 26 revised full papers and 3 short papers presented were carefully reviewed and selected from a total of 65 submissions The papers present recent research on challenges of implementing emerging technology solution for online online learning pedagogical frameworks facing COVID19 emergency in higher education teaching and learning online learning technologies in practice online learning strategies and resources etc **Rethinking the Concept of Law of Nature** Yemima Ben-Menahem,2022-06-13 This book subjects the traditional concept of law of nature to critical examination There are two kinds of reasons that invite this reexamination one deriving from philosophical concerns over the traditional concept the other motivated by theoretical and practical changes in science One of the philosophical worries is that the idiom of law of nature especially when combined with the notion of laws governing individual events and processes is no longer as intelligible as it used to be in the theistic context in which the formulation of laws became central to science The traditional concept is also challenged in various ways by contemporary scientific theories such as quantum mechanics chaos theory and the general theory of relativity It is no longer clear that there are any universal laws laws do not always guarantee predictability and the border between physical and mathematical considerations is constantly shifting The most difficult challenge perhaps is to come up with a scientific explanation of the origin of laws Wrestling with these intriguing problems the papers in this volume broaden both our understanding of the natural order and our desiderata of scientific explanation *Matter and Mind* Mario Bunge,2010-09-14 This book discusses two of the oldest and hardest problems in both science and philosophy What is matter and What is mind A reason for tackling both problems in a single book is that two of the most influential views in modern philosophy are that the universe is mental idealism and that the everything real is material materialism Most of the thinkers who espouse a materialist view of mind have obsolete ideas about matter whereas those who claim that science supports idealism have not explained how the universe could have existed before humans emerged Besides both groups tend to ignore the other levels of existence chemical biological social and technological If such levels and the concomitant emergence processes are ignored the physicalism spiritualism dilemma remains unsolved whereas if they are included the alleged mysteries are shown to be problems that science is treating successfully ENC Focus ,1999 **Innovative Curriculum Materials** ,1999
