Chapter 7 Energy Momentum and Energy

Show your work and include units!

$t = 0 \text{ s}$
momentum = $0 \text{ kg}(\text{m/s})$

$t = 1 \text{ s}$
momentum = $100 \text{ kg}(\text{m/s})$

$t = 2 \text{ s}$
momentum = $200 \text{ kg}(\text{m/s})$

$t = 3 \text{ s}$
momentum = $200 \text{ kg}(\text{m/s})$

$t = 5 \text{ s}$
momentum = $0 \text{ kg}(\text{m/s})$

Bronco Brown wants to put $Ft = \Delta mv$ to the test and try bungee jumping. Bronco leaps from a high cliff and experiences 3 s of free fall. Then the bungee cord begins to stretch, reducing his speed to zero in 2 s. Fortunately, the cord stretches to its maximum length just short of the ground below.

Fill in the blanks:

Bronco's mass is 100 kg.

Acceleration of free fall is 10 m/s^2 .

Express values in SI units (distance in m, velocity in m/s , momentum in $\text{kg} \cdot \text{m/s}$, impulse in $\text{N} \cdot \text{s}$, and deceleration in m/s^2).

$d = 1/2 at^2$

The 3-s free-fall distance of Bronco just before the bungee cord begins to stretch = 15 m

Δmv during the 0 to 3-s interval of free fall =

Δmv during the 3 to 5-s of slowing down =

Impulse during the 3 to 5-s of slowing down =

Average force exerted by the cord during the 3 to 5-s interval of slowing down =

How about work and energy? How much KE does Bronco have 3 s after he first jumps? 11,250 J

How much does gravitational PE decrease during this 3 s? -15,000 J

$1/2(100 \text{ kg})(15 \text{ m/s}^2)$
 $50 \text{ kg}(250 \text{ m}^2/\text{s}^2)$

What two kinds of PE are changing during the 3 to 5-s slowing-down interval?

Gravitational Potential Energy

Concepts of High-Energy Physics IX Thomas Ferbel, 2012-12-06 The ninth Advanced Study Institute AS on Techniques and Concepts of High Energy Physics was almost canceled before it began. A certain visitor to the area Hurricane Bertha arrived unexpectedly early in 1996. It was the first hurricane in memory to menace the Caribbean in early July. Fortunately it passed St. Croix several days before our meeting and left very little damage. The Altair survived the eye of the storm in the British West Islands. The meeting was held once again at the hotel on the Cay on that spec of land in the harbor of Christiantsted St. Croix U.S. Virgin Islands. After the first two days of at times outrageous downpour the 71 participants from 26 countries began to relax and enjoy the lectures and the lovely surroundings of the Institute. The primary support for the meeting was provided by the Scientific Affairs Division of the North Atlantic Treaty Organization NATO. The ASI was cosponsored by the U.S. Department of Energy by the Fermi National Accelerator Laboratory Fermi Lab by the U.S. National Science Foundation and by the University of Rochester. In addition the International Science Foundation contributed to the support of a participant from Russia. As in the case of the previous ASIs the scientific program was designed for advanced graduate students and recent Ph.D. recipients in experimental particle physics.

Techniques and Concepts of High-Energy Physics Thomas Ferbel, 2013-03-13 This past July about sixty physicists from sixteen different countries gathered at St Croix in the United States Virgin Islands for an Advanced Study Institute ASI on Techniques and Concepts of High Energy Physics The initial idea for the Institute arose one blustery and miserable day at Fermilab during discussions about all the wonderful summer schools that were prevalent throughout Europe but essentially nonexistent in the United States I felt that it would be of great value to have an Institute that was located in a beautiful area and that catered primarily to the hard working experimenters who stoically suffer both the winter cold and summer heat at Fermilab Summer schools in our field generally provide the very useful opportunity of meeting physicists who work along different lines of research as well as the opportunity of keeping abreast of new developments All schools tend to emphasize recent theoretical advances and phenomenology while technical questions that are of great interest to experimenters are seldom discussed It seemed appropriate therefore to organize a summer institute that would combine topics in accelerator design data acquisition and the like with the more standard theoretical fare This is the general idea that prevailed in setting up the program of the Institute at St

How Scientific Practices Matter Joseph Rouse, 2002 How can we understand the world as a whole instead of separate natural and human realms Joseph T Rouse proposes an approach to this classic problem based on radical new conceptions of both philosophical naturalism and scientific practice Rouse begins with a detailed critique of modern thought on naturalism from Neurath and Heidegger to

Charles Taylor Thomas Kuhn and W V O Quine He identifies two constraints central to a philosophically robust naturalism it must impose no arbitrarily philosophical restrictions on science and it must shun even the most subtle appeals to mysterious or supernatural forces Thus a naturalistic approach requires philosophers to show that their preferred conception of nature is what scientific inquiry discloses and that their conception of scientific understanding is itself intelligible as part of the natural world Finally Rouse draws on feminist science studies and other recent work on causality and discourse to demonstrate the crucial role that closer attention to scientific practice can play in reclaiming naturalism A bold and ambitious book *How Scientific Practices Matter* seeks to provide a viable yet nontraditional defense of a naturalistic conception of philosophy and science Its daring proposals will spark much discussion and debate among philosophers historians and sociologists of science
