

Question:

A satellite orbits the earth at a certain distance, and is kept in orbit by the force of the earth's gravity. When this same satellite is moved to a location that is twice as far away from the earth

- a. the force of gravitation attraction between the satellite and the earth is doubled.
- b. the force of gravitation attraction between the satellite and the earth is halved.
- c. the force of gravitation attraction between the satellite and the earth is quadrupled.
- d. the force of gravitation attraction between the satellite and the earth is decreased by a factor of 4.
- e. the force of gravitation attraction between the satellite and the earth is unchanged.

Answer:

The correct answer is *d*. The force of gravitational attraction between the earth and the satellite is described by Newton's Law of Universal Gravitation:

$$F = G \frac{m_1 m_2}{r^2}$$

Because the distance r between the two masses is in the denominator and squared, this law is called an *inverse-square law*. If r is doubled, we can see that r^2 is increased by a factor of 2^2 , or 4. And because this term is in the denominator, the force is *decreased* by this factor:

$$F_{\text{original}} = G \frac{m_{\text{earth}} m_{\text{satellite}}}{r^2}$$

$$F_{\text{new}} = G \frac{m_{\text{earth}} m_{\text{satellite}}}{(2r)^2} = G \frac{m_{\text{earth}} m_{\text{satellite}}}{4r^2}$$

$$F_{\text{new}} = \left(\frac{1}{4}\right) G \frac{m_{\text{earth}} m_{\text{satellite}}}{r^2} = \frac{1}{4} F_{\text{original}}$$

Theory of Energy Harmony Stanislav Tregub, 2020-08-08 Current mainstream theories of physics the Standard Model of particle physics and the General Theory of Relativity are incompatible due to the different mechanisms that they offer as explanations of fundamental energy interactions This is considered the main problem for unifying them into a theory of everything Unfortunately the problems are not limited to this issue Both theories contain arbitrary variables and constants that do not have any physical meaning and are fitted to the results of experimental tests every time the predictions fail Moreover the equations lead to infinities that are hidden by mathematical tricks to adjust the solutions to reality Many physicists consider this internal inconsistency to be a sign of the mathematical ingenuity of the models However the sad truth is that the descriptive and explanatory basis of the models is a muddle and the predictive power is zero Thus they are practically useless On top of this both postulate the existence of virtual entities responsible for observable physical interactions This means that the models have become metaphysical belief systems Some physicists dare to correctly call the situation the fall of theoretical physics as a science To see it rise we need an alternative path In the second volume the author continues to build the Theory of Energy Harmony based on the model of the universal mechanism proposed in the first part of the study This mechanism underlies all fundamental interactions and can be called a unifying physical principle The model does not use any virtual ghosts or arbitrary postulated parameters It is self consistent and adequate to reality It contains only empirically verifiable assumptions and predictions This is a paradigm shift that takes us back to physics

A New Vision of Liberal Education Alistair Miller, 2015-07-24 This is an extremely important book Wonderfully well researched and written it develops a powerful argument about how we should conceive of the aims of education and design curricula It should define the field for a very considerable period of time Professor Michael J Reiss Institute of Education University of London UK Many philosophers of education believe that the main aim of education is to endow students with personal autonomy producing citizens who are reflective make rational choices and submit their values and beliefs to critical scrutiny This book argues that the good life need not be the life of the philosopher politician or critical thinker but that an ordinary unexamined life is also worth living Central to this ethical life is the engagement in worthwhile activities or practices and the best way to prepare

pupils for their engagement in these practices is to cultivate a range of moral and intellectual virtues In this book Alistair Miller brings together a range of philosophical and historical perspectives to argue for a new vision of liberal education liberal in the sense that it forms a moral and cultural inheritance new in the sense that it would enable all pupils to lead flourishing lives Divided into two sections the first part of the book seeks to establish the justified aims of education in a liberal democratic society the second part explores the nature of the school curriculum that might realise these aims A New Vision of Liberal Education will appeal to researchers academics and postgraduate students in the fields of philosophy of education moral and values education liberal education and curriculum studies Man-Time-World Mogens True Wegener,2023-01-31

The present book is a collection of papers from my life as a philosopher Besides philosophy it also covers the topics of logics physics cosmology and theology In all these fields it has been my aim to propose new ideas as a solution to old problems The collection contains papers on issues from the entire European history of ideas treating philosophical themes of Plato Augustine Anselm Dante Cusanus Leibniz Kant Hegel Kierkegaard and Borges together with the logical ideas of Peirce and Prior the physical ideas of Einstein and Milne and the crazy hypotheses marring modern cosmology In order to clear the way for new ideas I have had to chastise cherished positions especially that of the current physical establishment which promotes Einsteinian relativity as if his theories were the final scientific answer to all questions concerning the universe Einstein was a great scientist no doubt but today he is exalted as the prophet of our time whose words are swallowed as the highest wisdom by lay people Further the cosmology founded upon his relativity theories are feigned to buttress the stance of the new atheism It is unbearable that our scientific societies and magazines do not accept ideas which question the currently established scientific paradigm This is dogmatism at its worst **Newton's Physics and the Conceptual Structure of the Scientific Revolution** Z. Bechler,2012-12-06

Three events which happened all within the same week some ten years ago set me on the track which the book describes The first was a reading of Emile Meyerson works in the course of a prolonged research on Einstein's relativity theory which sent me back to Meyerson's Identity and Reality where I read and reread the striking chapter on Irrationality In my earlier researches into the origins of French Conventionism I came to know similar views all apparently deriving from Emile Boutroux's doctoral thesis of 1874 De la contingence des lois de la nature and his notes of the 1892-3 course he taught at the Sorbonne De l'idée de loi naturelle dans la science et la philosophie contemporaines But never before was the full effect of the argument so suddenly clear as when I read Meyerson On the same week I read by sheer accident Ernest Moody's two parts paper in the JHI of 1951 Galileo and Avempace Put near Meyerson's thesis what Moody argued was a striking confirmation it was the sheer irrationality of the Platonic tradition leading from Avempace to Galileo which was the working conceptual force behind the notion of a non appearing nature active all the time but always submerged as it is embodied in the concept of void and motion in it
