

## Continuity and Differentiability - Homework

1. In the following graphs determine if the function  $f(x)$  is continuous at the marked value of  $c$ , and if not, determine for which of the 3 rules of continuity the function fails.

2. Find the value of  $x$  where the function is discontinuous.

a.  $f(x) = x^3 + 3^x$

$x = -8$

b.  $f(x) = \frac{5}{x^2 - 81}$

$x = 9, -9$

c.  $f(x) = \frac{x^2 + 2x - 24}{x^2 - 36}$

$x = 6, -6$

d.  $f(x) = \tan x$

$x = \frac{\pi}{2} + n\pi$

$n \in \mathbb{Z}$

3. Find whether the function is continuous at the value where the rule for the function changes.

a.  $f(x) = \begin{cases} 8 - x^2, & x < 2 \\ 6 - x, & x \geq 2 \end{cases}$

continuous

b.  $f(x) = \begin{cases} 4 - x^2, & x < 1 \\ 1 + x, & x \geq 1 \end{cases}$

not continuous

c.  $f(x) = \begin{cases} 2^x, & x < 3 \\ 10 - x, & x \geq 3 \end{cases}$

## Continuity And Differentiability Homework:

**The Foundations of Real Analysis** Richard Mikula, 2015-10-20 This textbook covers the subject of real analysis from the fundamentals up through beginning graduate level. It is appropriate as an introductory course text or a review text for graduate qualifying examinations. Some special features of the text include a thorough discussion of transcendental functions such as trigonometric, logarithmic, and exponential, from power series expansions deducing all important functional properties from the series definitions. The text is written in a user-friendly manner and includes full solutions to all assigned exercises throughout the text.

*Calculus for Cognitive Scientists* James K. Peterson, 2016-02-04 This book provides a self-study program on how mathematics, computer science, and science can be usefully and seamlessly intertwined. Learning to use ideas from mathematics and computation is essential for understanding approaches to cognitive and biological science. As such, the book covers calculus on one variable and two variables and works through a number of interesting first-order ODE models. It clearly uses MatLab in computational exercises where the models cannot be solved by hand and also helps readers to understand that approximations cause errors, a fact that must always be kept in mind.

**Basic Analysis I** James K. Peterson, 2020-05-13 *Basic Analysis I: Functions of a Real Variable* is designed for students who have completed the usual calculus and ordinary differential equation sequence and a basic course in linear algebra. This is a critical course in the use of abstraction but is just the first volume in a sequence of courses which prepare students to become practicing scientists. This book is written with the aim of balancing the theory and abstraction with clear explanations and arguments so that students who are from a variety of different areas can follow this text and use it profitably for self-study. It can also be used as a supplementary text for anyone whose work requires that they begin to assimilate more abstract mathematical concepts as part of their professional growth. Features: Can be used as a traditional textbook as well as for self-study. Suitable for undergraduate mathematics students or for those in other disciplines requiring a solid grounding in abstraction. Emphasises learning how to understand the consequences of assumptions using a variety of tools to provide the proofs of propositions.

Using Writing to Teach Mathematics Andrew Sterrett, 1990 This collection of essays is an outgrowth of the widespread interest shown in sessions of contributed papers on writing given at the 1988 and 1989 Annual Meetings of the MAA. Many of the 30 authors of the essays included in this volume participated in those sessions and each has considerable experience in requiring students to write about mathematics.

Analysis I Terence Tao, 2023-02-22 This is the first book of a two-volume textbook on real analysis. Both the volumes, *Analysis I* and *Analysis II*, are intended for honors undergraduates who have already been exposed to calculus. The emphasis is on rigor and foundations. The material starts at the very beginning: the construction of number systems and set theory. *Analysis I* Chaps 1-5 then on to the basics of analysis such as limits, series, continuity, differentiation, and Riemann integration. *Analysis I* Chaps 6-11 on Euclidean spaces and *Analysis II* Chaps 1-3 on metric spaces through power series, several variable calculus, and Fourier analysis. *Analysis II* Chaps 4-6 and finally to the

Lebesgue integral Analysis II Chaps 7 8 There are appendices on mathematical logic and the decimal system The entire text omitting some less central topics is in two quarters of twenty five to thirty lectures each      **Analysis II** Terence Tao, 2023-02-22 This is the second book of a two volume textbook on real analysis Both the volumes Analysis I and Analysis II are intended for honors undergraduates who have already been exposed to calculus The emphasis is on rigor and foundations The material starts at the very beginning the construction of number systems and set theory Analysis I Chaps 1 5 then on to the basics of analysis such as limits series continuity differentiation and Riemann integration Analysis I Chaps 6 11 on Euclidean spaces and Analysis II Chaps 1 3 on metric spaces through power series several variable calculus and Fourier analysis Analysis II Chaps 4 6 and finally to the Lebesgue integral Analysis II Chaps 7 8 There are appendices on mathematical logic and the decimal system The entire text omitting some less central topics is taught in two quarters of twenty five to thirty lectures each      Single Variable Calculus Gerald L. Ruch, Nicholas A. Scoville, 2023-09-27 It appears to me that if one wants to make progress in mathematics one should study the masters and not the pupils Niels Henrik Abel Recent pedagogical research has supported Abel's claim of the effectiveness of reading the masters Students exposed to historically based pedagogy see mathematics not as a monolithic assemblage of facts but as a collection of mental processes and an evolving cultural construct built to solve actual problems Exposure to the immediacy of the original investigations can inspire an inquiry mindset in students and lead to an appreciation of mathematics as a living intellectual activity TRIUMPHS TRansforming Instruction in Undergraduate Mathematics via Primary Historical Sources is an NSF funded initiative to design materials that effectively harness the power of reading primary historical documents in undergraduate mathematics instruction Teaching and Learning with Primary Source Projects is a collection of 24 classroom modules PSPs produced by TRIUMPHS that incorporate the reading of primary source excerpts to teach core mathematical topics The selected excerpts are intertwined with thoughtfully designed student tasks that prompt students to actively engage with and explore the source material Rigorously classroom tested and scrupulously edited to comply with the standards developed by the TRIUMPHS project each of the PSPs in this volume can be inserted directly into a course in real analysis complex variables or topology and used to replace a standard textbook treatment of core course content The volume also contains a comprehensive historical overview of the sociocultural and mathematical contexts within which the three subjects developed along with extensive implementation guidance Students and faculty alike are afforded a deeper classroom experience as they heed Abel's advice by studying today's mathematics through the words of the masters who brought that mathematics to life Primary sources provide motivation in the words of the original discoverers of new mathematics draw attention to subtleties encourage reflection on today's paradigms and
