

## DISTRIBUTIVE PROPERTY

8-2

The **Distributive Property** is used to express a monomial-monomial or a polynomial-monomial as like terms by multiplying each factor of the polynomial. The resulting monomial is an equivalent monomial for algebraic operations. Also see the methods, page 199. In general, the Distributive Property is expressed as:

$$a(b + c) = ab + ac \quad \text{and} \quad (b + c)a = ba + ca$$

### Example 1

$$3(x + 4) = 3 \cdot x + 3 \cdot 4 = 3x + 12$$

### Example 2

$$3x + 7y + 10z = (3 \cdot x) + (7 \cdot y) + (10 \cdot z) = 3x + 7y + 10z$$

Simplify each expression below by applying the Distributive Property. Perform the correct order of operations in problems 18 through 22.

1.  $5(x + 3)$

2.  $4(x + 2)$

3.  $2(x + 6y)$

4.  $3(x + 4y)$

14.  $5(x + 2y + 3)$

15.  $2(x + y + 6)$

16.  $-4(x + y + 3)$

17.  $4(x + 2y)$

18.  $4(x + 2^2 + x^2)$

19.  $4(x^2 + 3x + 7)(2)$

20.  $(x + 3 + x)(4)$

## **Distributive Property Lesson Plans Algebra :**

Basic Algebra and Geometry Made a Bit Easier Lesson Plans Larry Zafran, 2010 This is the fifth book in the Math Made a Bit Easier series by independent math tutor Larry Zafran. It contains 50 abridged lesson plans covering basic algebra and geometry for a target audience of tutors, parents, and homeschoolers. Each lesson plan includes all of the components of a typical classroom lesson such as aim, motivation, warm up, exercises, demonstrative examples, questions for thought and discussion, and connections to earlier and later material. This book is intended to be used in strict conjunction with the fourth book of the series, Basic Algebra and Geometry Made a Bit Easier Concepts Explained in Plain English. The book assumes that the instructor actually knows the material himself but could benefit from having a general guideline to follow. The author makes a point of identifying the concepts which most students tend to find easy or difficult, including suggestions on how to help with the latter. The book includes an introduction describing how the book can be put to best use, as well as a section on how to effectively work with students who are struggling with the material. The author explains that for the vast majority of students, the root of the problem can be traced back to never having fully mastered basic math concepts and skills. The book's lessons make frequent reference to reviewing earlier books in the series as needed, so that the student masters all of the prerequisite material.

**Math Made a Bit Easier Lesson Plans** Larry Zafran, 2010-01-19 This is the third book in the Math Made a Bit Easier series by independent math tutor Larry Zafran. It is a book of sixty lesson plans for tutors, parents, and homeschoolers. Each lesson plan includes all the components of a typical classroom lesson such as aim, motivation, warm up, exercises, demonstrative examples, questions for thought and discussion, and connections to earlier and later material. The math content in this book is directly aligned and ideally used in conjunction with the first book of the series and its companion workbook of practice exercises. It covers the topics which comprise the foundation of math, beginning with lessons in basic arithmetic, followed by basic operations, negative numbers, fractions, decimals, percents, and basic probability and statistics. If these topics are not completely mastered, later work will prove to be quite difficult. This is especially true of algebra. The book includes a chapter on how to be an effective math tutor, as well as a chapter on how to optionally incorporate meditation instruction to help students get into a relaxed and alert state of mind, which is ideal for learning math and taking exams.

**Lesson Planning with Purpose** Christy McConnell, Bradley Conrad, P. Bruce Uhrmacher, 2020 This book takes readers on a journey through many pathways to engaging and meaningful educational experiences. The text first discusses Perceptive Teaching and then explores five unique approaches to lesson planning: behaviorist, constructivist, aesthetic, ecological, and integrated social emotional learning. Chapters end with a sample lesson that can be compared across approaches.

Through detailed lessons and examples discover how to integrate technology in 6-12 math to amplify and enhance your mathematics teaching and drive student learning. Instead of drill and practice apps and worksheets, what if technology enabled exploration of math concepts? Instead of screens for disconnected individual learning, what if technology fostered mathematical discourse and collaboration? Instead of a one-size-fits-all approach to teaching mathematics, what if we used technology to differentiate to meet students' diverse needs? Technology has the power and potential to support the teaching and learning of math content at all grade levels, but the presence of technology is insufficient unless it's paired with effective teaching practices and meaningful content. This book poses and unpacks the above questions and many more with examples that illustrate how to integrate technology in the 6-12 math classroom, highlighting opportunities to transform mathematics teaching through strategic technology use. The book illustrates two contrasting examples in each chapter, including transcripts of sample class conversations, mathematical tasks, illustrations of student work, and reflection and discussion prompts. Features discussion of research-based ideas relating to the contrasts presented in the chapters, encouraging readers to connect what they learn from the specific cases with the research on these topics. Covers a variety of mathematics content areas such as functions and algebraic thinking, geometry and measurement, and data and statistics. Provides strategies for implementing the concepts in class with ideas and examples of tools based not on how they look but what they can do in your mathematics teaching. Today's technology offers more possibilities than ever for supporting students in mathematics. This book draws upon the latest research in technology and math education while providing tools to incorporate effective strategies into curriculum right away. Audience: 6-12 educators.

### **Teaching 6-12 Math Intervention** Juliana

Tappper, 2024-12-30. This practical resource offers a classroom-tested framework for secondary math teachers to support students who struggle. Teachers will explore an often overlooked piece of the math achievement puzzle: the gatekeeping cycles of mathematics and the importance of teachers' own expectations of students. The immediately applicable strategies in this book, developed through the author's work as a math intervention teacher, intervention specialist, and instructional coach, will give teachers the tools to help students overcome math anxiety, retention struggles, and even apathy. Beginning with a deep dive into the gatekeeping cycles to help teachers better understand their students who struggle, the book then walks teachers through the five-part B.R.E.A.K. it™ Math Intervention Framework: Build Community, Routines to Boost Confidence, Engage Every Student, Advance Your Expectations, Know Students' Level of Understanding. Educational research, personal anecdotes from the author's own classroom, and examples from case study teachers are woven into each chapter, leading to clear action items, planning strategies, and best practices that are accessible enough to accommodate all grade levels and schedules. The framework and activities in this book enable teachers to help students overcome math anxiety, create a safe math environment for 6-12 students, and ultimately increase achievement with effective research-based suggestions for working with students who struggle.
