**Schizophrenia Bulletin** , 1981 Reconstructing Schizophrenia Richard P. Bentall, 2013-05-13 The summaries of evidence have provided ready made challenges to previously unquestioned medical options the book provides a challenging update on the nature of scientific inquiry British Journal of Clinical Psychology Despite nearly one hundred years of research very little progress has been achieved in the understanding of schizophrenic behaviour There remains considerable uncertainty even about the fundamental features of the hypothesised illness *Reconstructing Schizophrenia* subjects the difficult concept of schizophrenia to rigorous scientific historical and sociological scrutiny They ask why a biological defect has been assumed in the absence of hard evidence and look at what can be done psychologically to alleviate schizophrenic symptoms Finally they explore what new models and research strategies are required in order to understand schizophrenic

behaviour The result is a book that provides a distinctive and critical perspective on modern psychiatric theories and which demonstrates the severe limitations of an exclusively medical approach to understanding madness

**Psychodiagnosis in Schizophrenia** Irving B. Weiner, 2013-06-17 Psychodiagnosis in Schizophrenia is a reprint of a classic volume in assessment psychology that first appeared in 1966 The book concerns the use of psychodiagnostic techniques in the differential diagnosis of schizophrenia The author first presents a conceptual analysis of schizophrenic disturbance in terms of impaired ego functioning and extrapolates from schizophrenic ego impairments to psychodiagnostic indices that have been demonstrated to assess them In particular Weiner refers to the Wechsler Adult Intelligence Scale the Rorschach Inkblot Method and the Draw A Person test Clinical and research data delineating the nature of psychological deficits in schizophrenia are reviewed and practical guidelines for the clinical assessment of these deficits are presented The author next considers several differential diagnostic possibilities frequently considered in the evaluation of schizophrenic persons with separate chapters devoted to the many forms of schizophrenia such as acute chronic paranoid nonparanoid incipient remitting borderline and pseudoneurotic There are also chapters that focus on schizoaffective disorder and adolescent schizophrenia The conceptual and empirical contributions to these distinctions are reviewed accordingly the differentiating characteristics of these subcategories are related to parameters of psychodiagnostic test performance In addition the process of differential psychodiagnosis in schizophrenia is illustrated by detailed case studies In an extended new preface the author comments on current perspectives and contemporary literature related to the individual chapters of the text

**Schizophrenia and Related Syndromes** P. J. McKenna, 1997 The incidence of aggression and violence is of wide concern It is therefore vital that we try to understand the mechanisms involved This book outlines definitions and theories of aggressive behavior and points out the contribution of both biological and psychological factors Aggression primarily occurs within an interpersonal exchange and is often accompanied by increased arousal and negative feelings It is most likely to occur in response to provocation but individuals differ in what they consider constitutes provocation Aggressive behavior is both multicausal and multifaceted but in order to study it we have to break it down into components and find ways in which to measure these This book describes a body of research examining the conditions under which the behavioral affective and physiological components of aggression are elicited A specific experimental technique which measures behavioral aggression in the laboratory is described The task was found to be sensitive to individual differences in aggressive disposition Aggression is not however confined to a small group of extremely hostile individuals Alcohol or substance abuse is often associated with aggression in the general population The results of some studies examining the effects of alcohol and Benzodiazepines on the feelings and behavior of healthy volunteers are reported The way in which people appraise a situation influences the way they feel and behave These drugs therefore impair the ability to process socially relevant information which in turn lowers the threshold at which aggressive behavior is likely to occur It is only by continuing to study the complex interaction between pharmacological and psychological factors that we will gain more insight into the processes underlying aggressive behavior

**Schizophrenia** Steven R. Hirsch, Daniel R. Weinberger, 2008-04-15 Schizophrenia is one of the most complex and puzzling diseases to affect mankind It is the most common of the severe mental illnesses psychoses with an estimated prevalence of 0.5-1% in the general population and accounts for a very large portion of the day to day workload of the average psychiatrist 50% of long term psychiatric patients in mental hospitals are schizophrenic There is a great deal of controversy about the causes diagnosis and treatment of schizophrenia with the

consequence that a huge amount of research is carried out in the field by psychiatrists psychologists neuroscientists and pharmacologists For the average practising psychiatrist seeing schizophrenics on a regular basis making sense of the vast body of information on the subject and filtering out what is of clinical relevance can be very difficult There is a constant stream of new drugs emerging and the new generation of drugs the so called atypicals is very effective but often expensive The Editors one American and one British are both highly respected clinical psychiatrists who are probably the leading experts on schizophrenia from their respective countries and jointly have published almost 150 papers on the subject They have brought together a strong group of contributors from the USA UK and Europe to produce what will be an essential reference for the trainee and practising psychiatrist The book consists of four sections descriptive aspects causative aspects physical treatments and psychological behavioural social treatments There will be discussion of the theoretical controversies over symptomatology classification and aetiology the relationship of schizophrenia to the other psychoses the significance of positive and negative symptoms and pre morbid personality There will be chapters on organic models of schizophrenia neurodevelopmental genetic and structural studies and the role of high expressed emotion The final section will cover social and environmental treatment the role of the families of schizophrenics and the psychoanalytical therapies There is a new chapter on the patient's perspective written by a former patient

*Adjustment of Schizophrenics in the Community* George. Serban, 2012-12-06 The mental health movement of early release into the community of the chronic schizophrenic has been based on a set of old theoretical assumptions and expectations which when tested on the community level failed to meet the desired results On the contrary the first visible outcome of deinstitutionalization was the revolving door policy with the patients repeatedly in and out of the hospital changing their previous status of inpatient to the new one of pseudoambulatory Yet this would not be a serious problem if the life of the patient in the community in between rehospitalizations was beneficial to him and to the community However the quality of life experienced by the patients in the community appears to be deplorable Available statistics indicate that over 70% of chronic schizophrenics discharged into the community live a marginal unproductive aimless life in dilapidated hotels or private proprietary homes Certainly though there are various scattered community programs for the rehabilitation of the schizophrenic the results are far from encouraging With these basic facts in mind we have to ask ourselves What went wrong with deinstitutionalization Apparently in the process of hasty deinstitutionalization too many issues were overlooked by the community mental health planners The most critical factor neglected by the policy makers was the establishment of more realistic criteria for the patient who can or cannot function in the community
