

### Ostomy care bag

- Change the bag for ostomy (4-7 days)
- 1/2 full of stool, 1/2 full of urine - empty bag
- Sticker: 2mm bigger than the diameter of the stoma
- Colostomy, ileostomy bag
  - 16 y/o girl, summer time
  - Watch for distorted body image, emotional assessment
  - Watch if bag gets wet
  - Educate patient: no high fiber foods, gas forming foods (causes issues)
- Hand hygiene, putting gloves on

### Preparing the stoma area:

- Shave any hair around, make sure area is dry so the sticker can stick better (skin prep, barrier paste)
- CNA can empty the bag, RN has to change the bag

### *Safety considerations:*

- Pouching system should be changed every 4 to 7 days, depending on the patient and type of pouch.
- Always consult a wound care specialist or equivalent if there is skin breakdown, if the pouch leaks, or if there are other concerns related to the pouching system.
- Patients should participate in the care of their ostomy, and health care providers should promote patient and family involvement.
- Encourage the patient to empty the pouch when it is one-quarter to one-half full of urine, gas, or feces.
- Ostomy product choices are based on the patient's needs and preference.
- Follow all post-operative assessments for new ostomies according to agency policy.
- Medications and diet may need adjusting for new ileostomies/ colostomies.
- An ostomy belt may be used to help hold the ostomy pouch in place.
- Factors that affect the pouching system include sweating, high heat, moist or oily skin, and physical exercise. (\*\* make sure the skin is dry: pink/moist)
- Always treat minor skin irritations right away. Skin that is sore, wet, or red is difficult to seal with a flange for a proper leakproof fit. (\*\* surrounding skin should be intact)
