Scattering and Diffraction by Wedges 1 Vito G. Daniele,Guido Lombardi,2020-11-17 The book has a dual purpose

The first is to expose a general methodology to solve problems of electromagnetism in geometries constituted of angular regions The second is to bring the solutions of some canonical problems of fundamental importance in modern electromagnetic engineering with the use of the Wiener Hopf technique In particular the general mathematical methodology is very ingenious and original It is based on sophisticated and attractive procedures exploiting simple and advanced properties of analytical functions Once the reader has acquired the methodology they can easily obtain the solution of the canonical problems reported in the book The book can be appealing also to readers who are not directly interested in the detailed mathematical methodology and or in electromagnetics In fact the same methodology can be extended to acoustics and elasticity problems Moreover the proposed practical problems with their solutions constitute a list of reference solutions and can be of interest in engineering production in the field of radio propagations electromagnetic compatibility and radar technologies
