Solutions of Fractional Systems Zahra Eidinejad, Reza Saadati, Tofiq Allahviranloo, Chenkuan Li, Javad Vahidi, 2025-09-30 This comprehensive book is designed for undergraduate master s and doctoral students in mathematics as well as scholars interested in a deep understanding of fractional problems The book covers a wide range of topics including the existence and uniqueness of solutions stability optimal controllers special functions classical and fuzzy normed spaces matrix functions fuzzy matrix normed spaces fixed point theory quality and certainty and various numerical methods The primary objective of this book is to analyze the existence and uniqueness of solutions for functional equations analyze stability and achieve the best possible results with minimal error With a clear and direct approach it presents advanced concepts in an accessible and comprehensible manner enabling students to apply their knowledge to solving various problems To prevent instability in fractional systems methods based on fixed point theory with the best approximation have been utilized The stability analysis

of fractional equations is conducted by considering classical and fuzzy normed spaces and employing special functions as optimal controllers In fuzzy systems the Z number theory has been used to enhance results and improve quality This theory enables the assessment of approximation accuracy and quality providing the best possible approximation The numerical analysis of fractional systems plays a crucial role in accurately modeling physical phenomena simulations and predicting complex systems By presenting numerical results from fractional systems which are essential in solving real world problems and optimizing computational algorithms this book serves as a valuable resource for both researchers and students
