Liberating Sociology: From Newtonian Toward Quantum Imaginations:

Volume 1: Unriddling the Quantum Enigma Mohammad H. Tamdgidi, 2020-01-20 In this major new study in the sociology of scientific knowledge social theorist Mohammad H Tamdgidi reports having unriddled the so called quantum enigma This book opens the lid of the Schrödinger's Cat box of the quantum enigma after decades and finds something both odd and familiar Not only the cat is both alive and dead it has morphed into an elephant in the room in whose interpretation Einstein Bohr Bohm and others were each both right and wrong because the enigma has acquired both localized and spread out features whose unriddling requires both physics and sociology amid both transdisciplinary and transcultural contexts The book offers in a transdisciplinary and transcultural sociology of self knowledge framework a relativistic interpretation to advance a liberating quantum sociology Deeper methodological grounding to further advance the sociological imagination requires investigating whether and how relativistic and quantum scientific revolutions can induce a liberating reinvention of sociology in favor of creative research and a just global society This however necessarily leads us to confront an elephant in the room the quantum enigma In *Unriddling the Quantum Enigma* the first volume of the series commonly titled *Liberating Sociology From Newtonian toward Quantum Imaginations* sociologist Mohammad H Tamdgidi argues that unriddling the quantum enigma depends on whether and how we succeed in dehabituating ourselves in favor of unified relativistic and quantum visions from the historically and ideologically inherited classical Newtonian modes of imagining reality that have subconsciously persisted in the ways we have gone about posing and interpreting or not the enigma itself for more than a century Once this veil is lifted and the enigma unriddled he argues it becomes possible to reinterpret the relativistic and quantum ways of imagining reality including social reality in terms of a unified nonreductive creative dialectic of part and whole that fosters quantum sociological imaginations methods theories and practices favoring liberating and just social outcomes The essays in this volume develop a set of relativistic interpretive solutions to the quantum enigma Following a survey of relevant studies and an introduction to the transdisciplinary and transcultural sociology of self knowledge framing the study overviews of Newtonianism relativity and quantum scientific revolutions the quantum enigma and its main interpretations to date are offered They are followed by a study of the notion of the wave particle duality of light and the various experiments associated with the quantum enigma in order to arrive at a relativistic interpretation of the enigma one that is shown to be capable of critically cohering other offered interpretations The book concludes with a heuristic presentation of the ontology epistemology and methodology of what Tamdgidi calls the creative dialectics of reality The volume essays involve critical comparative integrative reflections on the relevant works of founding and contemporary scientists and scholars in the field This study is the first in the monograph series *Tayyeb Series in East West Research and Translation of Human Architecture Journal of the Sociology of Self Knowledge* XIII 2020 published by OKCIR Omar Khayyam

Center for Integrative Research in Utopia Mysticism and Science Utopystics OKCIR is dedicated to exploring in a simultaneously world historical and self reflective framework the human search for a just global society It aims to develop new conceptual methodological theoretical historical practical pedagogical inspirational and disseminative structures of knowledge whereby the individual can radically understand and determine how world history and her his selves constitute one another Reviews Mohammad H Tamdgidi s Liberating Sociology From Newtonian Toward Quantum Imaginations Volume 1 Unriddling the Quantum Enigma hits the proverbial nail on the head of an ongoing problem not only in sociology but also much social science namely many practitioners allegiance consciously or otherwise to persisting conceptions of science that get in the way of scientific and other forms of theoretical advancement Newtonianism has achieved the status of an idol and its methodology a fetish the consequence of which is an ongoing failure to think through important problems of uncertainty indeterminacy multivariation multidisciplinary and false dilemmas of individual agency versus structure among many others Tamdgidi has done great service to social thought by bringing to the fore this problem of disciplinary decadence and offering in effect a call for its teleological suspension thinking beyond disciplinarity through drawing upon and communicating with the resources of quantum theory not as a fetish but instead as an opening for other possibilities of social including human understanding The implications are far reaching as they offer as the main title attests liberating sociology from persistent epistemic shackles and thus many disciplines and fields connected to things social This is exciting work A triumph The reader is left with enthusiasm for the second volume and theorists of many kinds with proverbial work to be done Professor Lewis R Gordon Honorary President of the Global Center for Advanced Studies and author of Disciplinary Decadence Living Thought in Trying Times Routledge Paradigm 2006 and Freedom Justice and Decolonization Routledge forthcoming 2020 Social sciences are still using metatheoretical models of science based on 19th century newtonian concepts of time and space Mohammad H Tamdgidi has produced a tour de force in social theory leaving behind the old newtonian worldview that still informs the social sciences towards a 21st century non dualistic non reductionist transcultural transdisciplinary post Einsteinian quantum concept of TimeSpace Tamdgidi goes beyond previous efforts done by titans of social theory such as Immanuel Wallerstein and Kyriakos Kontopoulos This book is a quantum leap in the social sciences at large Tamdgidi decolonizes the social sciences away from its Eurocentric colonial foundations bringing it closer not only to contemporary natural sciences but also to its convergence with the old Eastern philosophical and mystical worldviews This book is a masterpiece in social theory for a 21st century decolonial social science A must read Professor Ramon Grosfoguel University of California at Berkeley Tamdgidi s Liberating Sociology succeeds in adding physical structures to the breadth of the world changing vision of C Wright Mills the man who mentored me at Columbia Relativity theory and quantum mechanics can help us to understand the human universe no less than the physical universe Just as my Creating Life Before Death challenges bureaucracy s conformist orientation so does Liberating Sociology liberate the infinite possibilities inherent in us Given our

isolation in the Coronavirus era we have time to follow Tamdgidi in his journey into the depth of inner space where few men have gone before It is there that we can gain emotional strength just as Churchill Roosevelt and Mandela empowered themselves That personal development was needed to address not only their own personal problems but also the mammoth problems of their societies We must learn to do the same Bernard Phillips Emeritus Sociology Professor Boston University

The Publishers' Trade List Annual ,1880 *Applications of Conceptual Spaces* Frank Zenker,Peter Gärdenfors,2015-04-16 This volume provides an overview of applications of conceptual spaces theory beginning with an introduction to the modeling tool that unifies the chapters The first section explores issues of linguistic semantics including speakers negotiation of meaning Further sections address computational and ontological aspects of constructing conceptual spaces while the final section looks at philosophical applications Domains include artificial intelligence and robotics epistemology and philosophy of science lexical semantics and pragmatics agent based simulation perspectivism framing contrast sensory modalities and music among others This collection provides evidence of the wide application range of this theory of knowledge representation The papers in this volume derive from international experts across different fields including philosophy cognitive science linguistics robotics computer science and geography Each contributor has successfully applied conceptual spaces theory as a modeling tool in their respective areas of expertise Graduates as well as researchers in the areas of epistemology linguistics geometric knowledge representation and the mathematical modeling of cognitive processes should find this book of particular interest **Embracing Diversity in the Learning Sciences** Yasmin B. Kafai,William A. Sandoval,Noel Enyedy,Althea Scott Nixon,Francisco Herrera,2012-10-12 More than a decade has passed since the First International Conference of the Learning Sciences ICLS was held at Northwestern University in 1991 The conference has now become an established place for researchers to gather The 2004 meeting is the first under the official sponsorship of the International Society of the Learning Sciences ISLS The theme of this conference is Embracing Diversity in the Learning Sciences As a field the learning sciences have always drawn from a diverse set of disciplines to study learning in an array of settings Psychology cognitive science anthropology and artificial intelligence have all contributed to the development of methodologies to study learning in schools museums and organizations As the field grows however it increasingly recognizes the challenges to studying and changing learning environments across levels in complex social systems This demands attention to new kinds of diversity in who what and how we study and to the issues raised to develop

coherent accounts of how learning occurs Ranging from schools to families and across all levels of formal schooling from pre school through higher education this ideology can be supported in a multitude of social contexts The papers in these conference proceedings respond to the call *Quantum Language and the Migration of Scientific Concepts* Jennifer Burwell, 2025-10-28 How highly abstract quantum concepts were represented in language and how these concepts were later taken up by philosophers literary critics and new age gurus The principles of quantum physics and the strange phenomena they describe are represented most precisely in highly abstract algebraic equations Why then did these mathematically driven concepts compel founders of the field particularly Erwin Schrödinger Niels Bohr and Werner Heisenberg to spend so much time reflecting on ontological epistemological and linguistic concerns What is it about quantum concepts that appeals to latter day Eastern mystics poststructuralist critics and get rich quick schemers How did their interpretations and misinterpretations of quantum phenomena reveal their own priorities In this book Jennifer Burwell examines these questions and considers what quantum phenomena in the context of the founders debates over how to describe them reveal about the relationship between everyday experience perception and language Drawing on linguistic literary and philosophical traditions Burwell illuminates representational and linguistic problems posed by quantum concepts the fact for example that quantum phenomena exist only as probabilities or tendencies toward being and cannot be said to exist in a particular time and place She traces the emergence of quantum theory as an analytic tool in literary criticism in particular the use of wave particle duality in interpretations of gender differences in the novels of Virginia Woolf and critics connection of Bohr's Principle of Complementarity to poetic form she examines the quantum mysticism of Fritjof Capra and Gary Zukav and she concludes by analyzing nuclear discourse in the context of quantum concepts arguing that it too adopts a language of the unthinkable and the indescribable

The Quantum Brain A. Stern, 1994-03-03 While for the majority of physicists the problem of the deciphering of the brain code the intelligence code is a matter for future generations the author boldly and forcefully disagrees Breaking with the dogma of classical logic he develops in the form of the conversion postulate a concrete working hypothesis for the actual thought mechanism The reader is invited on a fascinating mathematical journey to the very edges of modern scientific knowledge From lepton and quark to mind from cognition to a logic analogue of the Schrödinger equation from Fibonacci numbers to logic quantum numbers from imaginary logic to a quantum computer from coding theory to atomic physics the breadth and scope of this work is overwhelming Combining quantum physics fundamental logic and coding theory this unique work sets the stage for future physics and is bound to titillate and challenge the imagination of physicists biophysicists and computer designers Growing from the author's matrix operator formalization of logic this work pursues a synthesis of physics and logic methods leading to the development of the concept of infophysics The experimental verification of the proposed quantum hypothesis of the brain is presently in preparation in cooperation with the Cavendish Laboratory Cambridge UK and if proved positive would have major theoretical implications Even more significant should be

the practical applications in such fields as molecular electronics and computer science biophysics and neuroscience medicine and education The new possibilities that could be opened up by quantum level computing could be truly revolutionary The book aims at researchers and engineers in technical sciences as well as in biophysics and biosciences in general It should have great appeal for physicists mathematicians logicians and for philosophers with a mathematical bent **Power, Equity and (Re)Design** Elizabeth Mendoza, Ben Kirshner, Kris D. Gutiérrez, 2018-05-01 This volume brings together design thinking critical social theory and learning sciences to describe promising learning innovations that foster rights dignity and social justice for youth The contributors are emerging scholars who are leading voices working at the intersections of theory and practice for educational equity Chapters in this volume take up themes of power and equity in the design and redesign of learning opportunities for young people The chapters show variation in the kinds of learning from complex ecologies spanning multiple institutions and age groups to specific classroom or after school spaces Chapters also vary in the focal ages of participants Although most discuss experiences of young people between the ages of 12 25 some also explore the learning of elementary age youth All of the chapters include the authors who were researchers designers teachers and facilitators part of the narrative and process of learning We are especially thankful that the authors of these chapters invite the reader into their thinking process and the tensions and contradictions that emerged as they sought to catalyze
